

SUSHMA B H

sushisushma54@gmail.com | +91 8050225991 | linkedin.com/in/sushma-b-h-500466257

EDUCATION :

Bachelor of Engineering - Computer Science And Engineering
AMC ENGINEERING COLLEGE

BENGALURU | July 2022

Coursework: Data Structures and Algorithms, Operating Systems , DBMS and Machine Learning .

WORK EXPERIENCE:

BIRLASOFT LIMITED

HYDERABAD | Nov 2023 - June 2024

TRAINEE DEVELOPER

- I contributed to the development of a banking web application using full stack Java Technologies.
- I developed and maintained server side components with Java, Spring Boot .
- I have Implemented front end features using ReactJS and JavaScript.
- Implemented RESTful APIs and integrated them.
- Participated in database design and management with SQL and Oracle.

BIRLASOFT LIMITED | Apprenticeship

April 2023 - Oct 2023

- I intensively got trained as an Apprentice on Java Full Stack Development.

PROJECTS:

RESTAURANT RATING PREDICTION:

PYTHON, ML, TKINTER

Using Zomato's order data, predicted the ratings of the 100+ restaurants. Conducted complex EDA and Feature Engineering on data, Applied XGBOOST, which gave 93 percent Accuracy, and finally deployed this model using TKINTER.

SOCIAL MEDIA ANALYTICS:

PYTHON, TWITTER API, NLTK

Twitter Analytics: Worked on Sentimental Analysis on COVID19.

CREDIT CARD FRAUD DETECTION:

PYTHON, LOGISTIC REGRESSION

Data had imbalance classes, so fixed this issue by solving them using three ways: under sampling, over sampling, and SMOTE, Applied Logistic Regression which gave 88 percent Accuracy.

SPAM MESSAGE CLASSIFIER:

IMBALANCED CLASSES, NLP, NAIVE BASE CLASSIFIER

On a set of Ham and Spam messages, used Regular Expression to clean the text, Used NLP techniques such as stemming, Lemmatize, Bag of Words and TF/IDF Matrix, Used Naive Bayes classifier to classify.

DBMS PROJECT ON ONLINE BABY SHOP :

JAVA, MySQL

It is software which is helpful for the businesses operate hardware stores, where storeowner keeps the records of sales and purchase. This project eliminates the paperwork, human faults, manual delay and speed up process. So, this software will be a relief to those who must do all this work manually. The knowledge of computers and programming has become a basic skill needed to survive in present information based on society. This way we are able to save database of all baby products present on the site and can buy any baby products easily.

WATER MANAGEMENT SYSTEM:

Arduino IDE, Arduino IOT Cloud

It is an IoT project. It helps farmers to do better irrigation by not wasting the water. The level of water in the tank is informed to the farmers on their phones. They can operate the motor remotely using network technology so that water can be stored efficiently.

VISUALIZED COVID-19 INDIA ANALYSIS:

TABLEAU

Created interactive Dashboards using COVID data to analyze number of Deaths, Cured, and Confirmed Cases based on the State and Country. Mainly used Choropleth Map to visualize the data.

SKILLS :

Languages: Python, Java, SQL, HTML, CSS, JavaScript, React JS

Data Base: MYSQL, Oracle DB

Technology: Machine learning, Natural language processing and Deep learning

Visualization: Tableau, Excel

CERTIFICATIONS :

- Currently pursuing Data Science Course in Besant Technologies.
- Certification of completion on Campus to Corporate (C2C) program organized by birlaSoft.
- Certificate of completing 6 months of intensive training in Java Full Stack Development at KodNest.
- Certification of Participation on attending two day workshop on "Arduino projects" at AMC Engineering College.
