Skills

- Python- NumPy, Pandas, Matplotlib, Seaborn
- MySQL- Joins, Window Functions, ETL processes
- Excel- Formulas, Pivot tables, Data Visualization
- DBMS
- Power BI
- Mathematics - Numerical analysis, Statistics, Linear regression, Linear algebra, Probability
- Machine Learning- Neural Network, Clustering, Classification model, Supervised and Unsupervised Learning
- Generative AI
- Soft skills- Problem-solving, Adaptability, Project Management and Communication Skills

Projects

E-Commerce Shopping ChatBot Assistant

Built a Python-based chatbot for product search, price comparison, shipping estimation, discount application, and return policy checks, enhancing the shopping experience.
GitHub: <https://github.com/tejaswitabhati/Assignment-ai-research-engineer->

Automated Data Entry Using Decision Tree Classification

Automated an in-house application using a decision tree-classification algorithm to auto-generate form filling options for drug testing subject sheets, using first-phase results to simplify data entry from the second phase to the final phase.

Dissertation on Malicious Social Bots Detection for Tweeter Dataset based on Machine Learning

Applied K-means clustering (unsupervised learning) to group data, followed by a minimum spanning tree to analyze relationships and derive numerical results

Certifications

DevOps Essentials

Issued by IBM

Introduction to Cloud Computing

Issued by IBM

Introduction to Generative AI

Issued by Google Cloud Training

Summary

Experienced in coordinating AI-driven projects, managing data pipelines, and optimising workflows for seamless execution. Skilled in stakeholder management and translating client requirements into actionable deliverables.

Work Experience

AI Researcher

Turing

November 2024 - Present

Collaborated with cross-functional teams to ensure smooth AI model deployment and optimised data pipeline workflows.

Training large language models (LLMs) to align with business requirements using advanced techniques such as prompt engineering, supervised fine-tuning, and reinforcement learning from human feedback (RLHF).

Focusing on improving model performance to deliver accurate, context-aware, and scalable AI solutions tailored to client needs.

Supporting business objectives by developing AI-driven tools to streamline operations, enhance decision-making, and ensure measurable project outcomes.

Contributing to the end-to-end implementation of AI solutions, aligning project goals with business strategies and driving innovation to meet end-user expectations.

Assistant System Engineer

Tata Consultancy Services

March 2021 - June 2022

Worked closely with internal and external stakeholders to automate workflows and improve operational efficiency.

Conducted thorough testing of SQL queries in QA and test environments to ensure functionality before deployment, while resolving complex query issues and providing analytical support to address daily data challenges across multiple in-house applications.

Utilized Excel to transform raw data into structured formats, perform statistical analysis, create graphs, and deliver insights aligned with client need.

Responsible for knowledge transition for new teammates.

Intern

Airport Authority of India

June 2018 - July 2018

Shadowed staff working with HF Transmitters and Advanced Surface Movement Guidance and Control System (ASMGCS), observing how datasets related to air traffic, schedules, delays, and weather patterns are collected and cleaned for aviation safety.

Gained insights into analyzing air traffic patterns and using Supervised Learning for predicting flight delays.

Learned about Reinforcement Learning for optimizing flight scheduling and minimizing congestion.

Intern

Ernst & Yong

December 2017 - January 2018

Shadowed the Software Testing Team: Observed how the team analyzed test data to identify patterns and determine the root cause of software performance and functionality issues.

Learned about data-driven techniques used for validating test results, ensuring data accuracy, and maintaining software quality through problem-solving and critical thinking.

Gained an understanding of how data behaves and how to manipulate it to create realistic datasets for comprehensive testing.

Education

Gautam Buddha University, Greater Noida

Integrated B.Tech + M.Tech

Scored 7.04 CGPA

B.Tech in Electronics and Communication Engineering

M.Tech in Artificial Intelligence and Robotics
