

TRIVENI KAYAKOKULA

Mobile : +91 7672007926

E-Mail : trivenikayakokula1234@gmail.com

Career objectives:

To succeed in an environment of growth and excellence and earn a job Which provides me a job satisfaction and self-development and help me achieve as well as Organization goals.

Academic qualification:

Academic	University/college	Year of completion	Percentage in CGPA
B. Tech	ST. Mary’s Women’s Engineering college in Guntur, JNTUK	2019-2023	65
Intermediate	Palanadu junior college, Macherla	2017-2019	80
SSC	Zp high school, Veldurthi	2016-2017	80

Technical Skills:

- **Programming Languages**
 - Shell Scripting (Linux)
 - Advanced C Programming Language
 - Data Structures and Algorithms
 - C++ (Object – Oriented Programming)
- **System programming:**
 - Embedded Programming
- **Embedded Controllers**
 - Working with GPIO’s, Analog IO’s, Memory Usage
 - Peripheral usage – Timers, Counters, Interrupts, ADC, PWM.
 - Communication Protocols – UART, SPI, I2C, CAN etc
- **Embedded Platform:**
 - Distribution – Linux (Ubuntu)
 - PIC (18f4580) board.
- **Development environment and tools:**
 - Dev Environment: Vi, Make files, MPLAB XIDE
 - Compilers : GCC, XC8

Projects:

- **Title: Heart attack and alcohol detection sensor monitoring in smart transportation system using GSM**

The project is mainly focused on the safety measures for both driver and vehicle by using three types of sensors: Heartbeat sensor, light sensor and alcohol Sensor. Heartbeat sensor is used to monitor heartbeat rate of the driver constantly and prevent from the accidents by sending SMS through GSM. Apparently, GSM sends the SMS to conveys the emergency message to the Owner, Ambulance and the Police.

- **Title: Image Steganography using LSB mechanism (C Language)**

The goal of this project is to use LSB Image Steganography to hide secret data in images. This project is designed to conceal information by using LSB image steganography on a .bmp image file.

Technologies Used: Advanced C - Structures, Enum, File I/O operations, File pointers, string operations, Bitwise operations, Command line arguments.

- **Title: Inverted Indexing using Hash Algorithms (C and DSA)**

An inverted index is an index data structure storing a mapping from content. The purpose of an inverted index is to allow fast full text searches, at a cost of increased processing when a document is added to the database.

Technologies Used: Advanced C – Data structures, Hash Table, Linked List, Structures, Dynamic memory, Pointers, File I/O Operation, Make files.

- **Title: Car Black Box (Micro Controller)**

Black box it is an automotive system to log critical events this will help in proactive vehicle monitoring and maintenance. And it is data recorder which is used in car to store the data like car speed, time and events, in this project we can view the details and download data and clear data stored in recorder.

Technologies used: Embedded C – PIC18f4580, CLCD, RTC(I2C), ADC, Tactile switches, External EEPROM.

Board Name: Rhydo Labz.

Compiler: MPLAB X IDE

Achievements:

- Printed Circuit Board design workshop certified
- Throwball competition won in college
- Tug of war competition won in college

Strengths:

- Willing to learn new skill start from basic level etc.
- Excellent verbal and written communication skills.
- Ability to take responsibilities.
- Critical-thinking skills.

Acknowledgement:

I hereby declare that all the details provided above are true to the best of my knowledge.
