SUMMARY:

I have 5 years of IT experience in Data warehousing and Business intelligence with an emphasis on Project Planning & Management, Business Requirements Analysis, Application Design, Development, testing, implementation, and maintenance of client/server Data Warehouse. Seeking to have a challenging career in Data Warehousing and Business Intelligence with growth potential in technical as well as functional domains and to work in critical and time-bound projects where can apply technological skills and knowledge in the best possible way.

Experience

Lead Software Engineer

Persistent System Private Ltd.

AT&T (ALLIANCE AIM), Pune

2023- Present

Alliance AIM Transformation Project:

This project involved in migrating data from source systems and is fed into the EDW (Enterprise Data Warehouse). This process includes extraction of data from source systems, applying transformations and loading the data after the query tuning and performance check. As part of transformation the project has been migrated to snowflake. The process of Extraction, transformation, compare and loading of the Data from source into the Data warehouse is done using the Snowflake, Snowpipe. Coding of the processes is done using SnowSql scripts. These Processes are scheduled to run daily. Teradata SQL and Client Utilities have played a significant role in migrating the data-to-Data warehouse and achieving the expected gains expected gains. I involved in all the activities during the transformation.

Roles & Responsibilities:

- * Understanding the business requirements.
- * Designed and implemented end-to-end data warehouse solutions using Snowflake ETL, including schema design, table models, table structures
- * Implemented Snow pipe using Azure Data warehouse (Azure Synapse Analytics) for real-time data ingestion, enabling near-real-time analytics and reporting capabilities.
- * Led the snowflake migration development project from last 2 years.
- * Wrote and optimized SQL queries and shell scripts to assist business intelligence practices.
- * Managed Teradata data warehouse projects, overseeing data modelling, performance optimization, and ETL development.
- * Involved in Creating Wrapper and KSH Scripts in Unix/Linux.
- * Schedules in Maestro TWS.
- * Extensively worked on data validations, Parallely comparing the data between the systems Teradata to Snowflake.
- * Worked on COPY/INSERT, PUT, GET commands for loading data into Snowflake tables from internal and external stages.
- * Implemented solutions using snowflake's data sharing, cloning and time travel.
- * Conducting training and Knowledge sharing sessions for Testing team and Production support teams.
- * Teradata Spool Analysis and optimization for the WSAH tables. - A systematic analysis of the spool, executing explain plan, store data in small batch for optimization and prevent spool for future use.
- * Involved in Unit Testing, Integration testing and User acceptance testing.
- * Worked on scheduling the snowflake jobs with Tivoli workload scheduler.
- * Extensively worked on initial load during the transformation project and involved in delta loads and validations.

Senior Software Engineer

Persistent , AT&T

2023 - 2024

Smart Scan - A Data Certification Tool :

Smart scan is a tool developed by Amdocs team. The purpose of this tool is to certify the tables deployed into snowflake by validating the data between systems Teradata to Snowflake. Modernization of EDW warehouses containing huge amounts of data in legacy databases like Teradata to cutting-edge Snowflake Cloud Data Warehouses for more efficient and seamless data warehouse administration and maintenance.

Below are the key factors that favored the Smart Scan - A Data Certification Tool.

- * Expensive licensing of external tools support.
- * Limited data control and validation capabilities.
- * Intense manual efforts needed for data validation G data analysis.

Roles & Responsibilities:

- * Involved during the design and development of the tool.
- * Designed in a smart way to configurable database connections and input parameters to allow seamless execution in any target applications environment.
- * Implemented an end-to-end automated process for compressed data export, data counts, data comparison, and data validation.
- * Insightful Reporting capabilities which will address the real time issues for the table.
- * Maintained and scheduled the report to have daily reports.
- * Implemented type 2 data validation which will reduce the run time and space on the server.
- * Actively addressed all the data issues and provided the fix.
- * Worked on creating the next version of the tool for the better performance.
- * Implemented pre/post count checks for the tables during the smartscan report.
- * Created dashboard reports and statistics on the application level.

Software Engineer - DWH/BI Developer

Tech Mahindra Pvt Ltd

AT&T Data Warehousing (ECDW)

2019 - 2022

ECDW:

eCDW supports integrated data for Billing, Finance, Business,Core (EDWDB), Sales, Marketing, Inventory, Uverse, Customer and other data areas as well as supporting DataMarts. Development batch jobs to load Snowflake tables through IBM Tivoli Workload Scheduler(TWS) on a Microsoft Azure Virtual Machine. The process of Extraction, transformation, compare and loading of the Data from source into the Data warehouse is done using the Teradata Client Utilities like Fast load and Multiload.

Roles & Responsibilities:

- * Maintained knowledge base of issues for future reference which brought down the overall time required for resolution.
- * Managed the Operations team to meet P1 and P2 Service Level Agreement (SLA) commitments on a daily basis.
- * Worked on different technologies like SQL, Linux, Unix Shell scripting, TWS, ETL and Teradata to transfer AT&T Finance, and AOTS.
- * Experience in monitoring Essbase servers and EAS studio console.
- * Performed Root Cause Analysis (RCA) for issues attributed to Operations team.
- * Developed batch jobs to load Snowflake tables through IBM Tivoli Workload Scheduler(TWS) on a Microsoft Azure Virtual Machine.
- * Guided the Operations team in the event of an outage/incident, and issued advisories to the impacting users of the Data Warehouse.
- * Create TWS schedule to run job.
- * Connecting to Snowflake Cloud DB and process date with Linux scripts and load into main oracle DB.
- * Worked exclusively with the Teradata SQL Assistant.
- * Performed unit testing and preparing the test cases.
- * Involved in Data validation

CERTIFICATIONS AND ACHIEVEMENTS:

Snowflake: Snow pro certification
Microsoft Certified: Azure Data Fundamental(DP-900)
Microsoft Certified: Azure Fundamental(AZ-900)
Databricks: Databricks Accredited Generative AI Fundamental
Being Identified as Top Talent 2024
Bravo Awards for Client Appreciation

EDUCATION

Bachelor of Engineering – Rajiv Gandhi College of Engineering, Research and Technology, Chandrapur 2018
CGPA- 8.44/10
