Uday Raina

C++ Expert | Cybersecurity | OSQuery Specialist | Heterogeneous Computing | Linux Expert
Bengaluru, Karnataka, India

Summary

Experienced software engineer with 15+ years of expertise in C++, cybersecurity, and heterogeneous computing. Skilled in developing high-performance solutions for distributed systems, embedded platforms, and real-time applications. Adept at leveraging Linux-based development and advanced diagnostics tools like OSQuery to create secure and scalable architectures.

Proficient in accelerating complex algorithms on heterogeneous platforms (CPUs, GPUs, TPUs) using modern frameworks like CUDA, SYCL, and OpenCL. Passionate about driving innovation in cybersecurity, real-time monitoring, and active safety systems through robust, scalable software solutions.

Experience

Uptycs

Principal Software Engineer
January 2023 - Present (2 years)

Designed and implemented scalable architectures for real-time system diagnostics and security monitoring tools.

Enhanced IT infrastructure security using OSQuery and Uptycs' platform for actionable insights, vulnerability management, and compliance enforcement.

Led the development of agentless side-scanning features, improving security monitoring capabilities and cloud workload protection.

Cohesity

Member Of Technical Staff
August 2021 - January 2023 (1 year 6 months)

Remote

Worked on distributed systems for cloud and hybrid environments, optimizing data management and cybersecurity with a focus on rapid data recovery and continuous security monitoring.

Implemented cloud workload protection (Cohesity Data Cloud), streamlining backup, archiving, and disaster recovery for hybrid clouds

Blaize

Staff Software Engineer

September 2014 - August 2021 (7 years)

India

Developed both User Mode and DRM-based Linux Kernel Mode Driver for Blaize's Pathfinder Embedded System-on-Module.

Designed and led the development of GPU-accelerated solutions for autonomous systems and active safety technologies, utilizing OpenVX for image processing and machine vision applications.

Built and led a team of 10 engineers to create System-on-Chip (SoC) modules for embedded systems in automotive applications, achieving optimized performance for real-time processing.

Collaborated across departments to ensure seamless integration of hardware and software components, significantly improving system efficiency and functionality

Intel Corporation

Software Engineer

August 2011 - April 2014 (2 years 9 months)

India

Developed the Core Kernel Mode Media Driver for Windows 8 HEVC decoding for Intel's platform chipset code-named "Cherrytrail".

Developed the Core Kernel Mode Graphics Memory Management Unit for Intel's low-powered Android platform chipset code-named "Baytrail".

Education

Birla Institute of Technology and Science, Pilani

Bachelor of Engineering - BE, Electrical and Electronics

Engineering · (2006 - 2011)

Birla Institute of Technology and Science, Pilani
Master of Science - MS, Economics · (2006 - 2011)
