Profile

AWS Certified Solutions Architect and DevOps Engineer

AWS Certified Solutions Architect and DevOps Engineer with a comprehensive background in cloud computing, operations, and DevOps. Currently working as a DevOps and Operations Engineer, I excel in designing and deploying scalable, efficient solutions on AWS, with hands-on expertise across a wide range of AWS services. Skilled in optimizing cloud environments, streamlining workflows, and implementing automation to drive operational efficiency. Proficient in AWS, I develop robust solutions and automate repetitive tasks to enhance productivity. I am eager to leverage my expertise in cloud technologies and operational management to support and advance the company's cloud initiatives within a collaborative, innovative team.

EDUCATION

06/2020 – 06/2024 Pune, India	B. Tech. IT G.H Raison Institute of Engineering & Technology
06/2018 – 06/2020 Nanded, India	Computer Science HSC Sana Junior college of Arts Commerce & Science.

WORK EXPERIENCE

06/2023 – 05/2024 Pune, India	DevOps Intern Vegosys Technologies LLP Duration: 1 year Cloud Infrastructure Management: Designed, implemented, and managed AWS cloud infrastructure, including EC2 instances, S3 buckets, and VPCs, ensuring efficient, scalable deployment. CI/CD Pipeline Automation: Supported the automation of CI/CD pipelines, streamlining build, test, and deployment processes to enhance delivery speed and minimize manual intervention. Performance Monitoring & Troubleshooting: Monitored application performance and infrastructure health using tools like AWS CloudWatch and Grafana, actively identifying and resolving issues to maintain system reliability. Data Analysis & Visualization: Conducted data analysis to assess quality, identify trends, and provide actionable insights. Developed data visualizations to facilitate faster client decision-making. Data Warehousing Knowledge: Applied knowledge of Data Warehousing, including OLAP and OLTP concepts and data modeling, to optimize data storage and access patterns. Cross-functional Collaboration: Worked closely with development teams to optimize deployment processes and enhance overall system efficiency. Documentation & Knowledge Transfer: Documented operational procedures, best practices, and troubleshooting methods to ensure consistent knowledge sharing and team alignment. Adaptability & Continuous Learning: Demonstrated strong analytical and problem-solving skills, a proactive attitude, and a quick learning capability, adapting to new technologies and tools to support project goals.
-------------------------------------	--

06/2024 –
presentPune,
India

Operation Engineer
Sixdee Technologies
Duration: [Present]

- **Infrastructure Management:** Oversee and manage operational infrastructure to ensure high availability, scalability, and optimal performance of systems in a cloudenvironment, leveraging AWS and Kubernetes portals.
- **System Monitoring & Incident Management:** Continuously monitor system performance using X-shell, MobaXterm, and AWS monitoring tools. Respondpromptly to incidents using Remedy to maintain service uptime and ensure consistent quality.
- **Deployment & Automation:** Develop and implement automation scripts to streamline routine operational tasks, improving efficiency and reducing manualworkload.
- **Cross-functional Collaboration:** Collaborate closely with DevOps and development teams to support smooth deployments, troubleshoot issues, and optimize system functionality, ensuring alignment with operational goals.
- **Data Analysis & Reporting:** Utilize Postman and other analysis tools to examine operational data, identify trends, and generate reports, providing actionable insightsfor system improvements and strategic decision-making.
- **Documentation & Process Improvement:** Create and maintain detailed documentation of operational processes, procedures, and troubleshooting guides topromote best practices and facilitate efficient knowledge sharing.
- **Problem-solving & Continuous Improvement:** Proactively identify areas for improvement and apply effective problem-solving skills to enhance operational workflows and support continuous improvement initiatives.

CERTIFICATION

AWS Certified Solution Architect - Associate

Microsoft Security Compliance & Identity Fundamentals

Advanced Google Analytics

Top performer (Internship &Job Preparation Training) certified Intershala

PROJECTS

1: Blockchain-Verified Marketplace with Equipment Rental Service [Final Year Project]

This project leverages blockchain technology to verify product authenticity, addressing the challenge of counterfeit productsand ensuring farmers receive genuine goods. By scanning each item through a blockchain ledger, farmers can trust the authenticity and quality of the products they purchase. Additionally, the platform offers an equipment rental service for farmers who may lack the necessary machinery, providing them with affordable access to essential tools.

This rental model not only supports sustainable farming practices but also generates revenue, fostering a more accessibleand economically viable agricultural ecosystem.

2: VIL

In my role on the COM team for the VIL project, I am responsible for monitoring system failures and promptly escalating issues to the appropriate teams to ensure seamless operations. I utilize AWS tools for cloud management, as well as Xshell,MobaXterm, and Remedy for efficient incident handling and system access. Additionally, I use Kubernetes for log retrieval and MySQL for database management. I have developed scripts to automate routine processes, reducing manual workload and enhancing operational efficiency. As part of order management, I perform manual corrections as needed to ensure successful order completion and streamline workflows.

3: TPF Tata Play Fiber

In my role on the COM team for the TPF project, I play a key role in managing customer orders and monitoring system performance, ensuring any issues are swiftly identified and escalated to the appropriate teams for prompt resolution. Leveraging AWS tools, including EC2, along with MySQL and TPF UI portals, I manage data effectively and oversee process workflows. Kubernetes is employed to retrieve and analyze system logs, and I have developed automation scriptsto optimize routine tasks, minimizing manual intervention. I also perform manual adjustments as required to facilitate orderfulfillment, contributing to a reliable and efficient order management ecosystem.

1: President of [ITSA] Information Technology Student Association.

Provide strategic leadership and direction for the organization, fostering a collaborative environment for IT students to enhance their academic and professional development.

Organize and oversee a variety of events, workshops, and seminars that promote knowledge sharing, networking opportunities, and skill development within the IT community.

Coordinate with faculty, industry professionals, and student members to develop initiatives that align with the goals of the association and address the needs of IT students.

Manage a team of executive members, delegating responsibilities and ensuring effective communication and collaboration among team members.

Advocate for student interests within the university, representing the association at meetings and events to promote engagement and participation in IT-related activities.

Monitor and manage the association's budget, ensuring responsible allocation of resources for events and initiatives.

2: [NSS] National Service Scheme Member.

Actively participate in community service initiatives aimed at fostering social responsibility and civic engagement among youth.

Collaborate with team members to organize and execute various outreach programs, including health camps, environmental clean-ups, and educational workshops for underprivileged communities.

Engage in awareness campaigns addressing critical social issues, promoting values of empathy, inclusivity, and sustainability within the community.

Contribute to planning and executing events that encourage volunteerism and enhance community involvement among fellow students.

Develop strong leadership and teamwork skills through active participation in NSS activities, enhancing personal growth and commitment to social service.
