

VIKAS MADIVAL

Electronic City, Bangalore -560100

8095717570 | vikasmadival@gmail.com

Career Objective

To be a leader, achiever and do things differently and innovatively, to work in coherent environment where I can optimize my potentials, human values and prove my worth.

Professional summary

IT professional with over 6 years of experience in the industry as Software Engineer with reputed company, managing Payment Application Development and Maintenance for different modules also executing successful deliveries of software modules using technologies like C, C++, Python with agile methodology. Experience in Development, Testing and support Safety Manager application using technologies Delphi 10.2 and C# WPF, XML. Analyse code for application testing and debugging. Create sample application to find, isolate and rectify issues.

Experience

Senior Software Engineer - 6/2023 to Present

Foray Software Private Limited

Client: Visa,

We as a team onboarding new NSA model which predicts fraud risk for card authorization request for non-Visa (MasterCard, American Express) transactions. Worked on Ecryptmatics engine (Scoring) written in C++ code which hosts the multiple model. Used various data structure components like lists, STL ,etc., LL Design patterns.

- ☐ Enhanced Ecryptmatic code base to support multiple models to Host.
- ☐ Modified C++ wrapper around ECryptmarics exposing gRPC interface as standalone microservice.
- ☐ Used Hashocrp-Nomad for model deployment on QA & DEV environment
- ☐ Familiar with ghz client tool for load testing and performance benchmark for gRPC call.
- ☐ Written GUnit test cases for the newly written Modern C++ code and coverage is 95%
- ☐ Fixed all SonarQube and CheckMarx findings of bugs.
- ☐ Used gprof and pprof profiling tool for the performance fine tuning.

Software Engineer II - 10/2021 to 6/2023

Honeywell, Bangalore

We as a team develop a tool (Safety Builder) which is used in the Industrial Safety Domain.

I worked on Delphi Programming language,C++ and C# WPF which is used for developing the Safety Builder tool. As an Software Engineer my Job here is to do the development, enhancements , maintenance of the tool.Along with the development(coding),I have learnt many things like Requirements gathering, writing requirements, discussions with Stakeholders for reviewing the requirements, design, code, use cases. Give Demos to the Stakeholders, Helping the Documentation

Team. Worked on event driven and micro service architecture. Used LL design patterns like SOLID, singleton.

- ☐ Enhanced Safety Manager application using Delphi programming language
- ☐ Implement new features to safety device (Ex. Adding new properties).
- ☐ Implemented the OCR technology to recognize the characters in the scanned document.
- ☐ Worked on windows-based application using technologies like WPF .NET Framework
- ☐ Creating requirement and Design document using UML.
- ☐ Implementing component test case for unit test.
- ☐ Resolving customer raised issue without breaching SLA.
- ☐ Migrated Safety builder project from Delphi 10.2 to Delphi 11.
- ☐ Used collaborator to raise review request.
- ☐ Implement the Test Cases using NUnit & DUnit Framework.
- ☐ Involved in all aspects of Software Development (SDLC). Documentations, Coding, Integration Testing and Peer Review

Project Engineer - 11/2018 to 09/2021

Wipro Technologies, Bangalore

- ☐ Implement and maintain components to the solution.
- ☐ Understanding the complex logic to implement new feature and Bug fixing.
- ☐ Writing C++ code to add new feature to Payment Application using OOPS.
- ☐ Enhanced existing logic to support FLEET Card, PIN Entry for GIFT cards, Passthrough Capture.
- ☐ Used Git to manage different repo branches, integrating many branches in one verifying one successful build.
- ☐ Production support, bug/defect fixing, integration.
- ☐ Modifying and writing BPEL file to reflect the changes in UI Screen.
- ☐ Involved in all aspects of Software Development (SDLC). Documentations, Coding, Integration Testing and Peer Review.
- ☐ Used Model View Controller Architecture to better understand the project at one glance.
- ☐ Prepare unit test cases and perform the unit testing.
- ☐ Followed coding standards as per SonarQube.
- ☐ Coordinate with QA for testing and with operation team for production deployment.

PROJECT DETAILS

Client: Verifone (Electronic payment transaction and POS devices)

C++ Application programming as a developer, Responsible for development, support, maintenance and implementation of complex components of a project module. Able to work as an independent team member, capable of applying your own judgment in the areas of software development. Having thorough knowledge of development technology/ programming language, and the related tools.

- ☐ Worked on JIRA tools for bug tracking.
- ☐ Fixed Verix applications for Linux operated POS devices
- ☐ Created the encryption SW using linux storage
- ☐ Successfully resolved issues raised by the customer without breaching SLA.
- ☐ Familiar on different verifone device models(Ex E355, VX690, VX675 etc.,)
- ☐ Used Jenkins jobs for continuous integration and testing.
- ☐ Solved more numbers of SonarQube reported bugs, code smells, magic numbers.
- ☐ Currently working on Verix Extended OS API's(majorly network (TCP/IP protocol) Interfaces).
- ☐ Tools used: Git, JIRA, Jenkins,wireshark, putty.

Education

JSS Academy of Technical Education ,Bangalore, Karnataka.

VTU

June,2018

Bachelor of Engineering in Computer Science, June 2018

Technical Skills

- ☐ **Programming Languages:** C/C++,Core Java,Delphi, Python, C# WPF
- ☐ **Operating System:** Microsoft windows, Ubuntu, MacOS, Linux
- ☐ **Other Languages :** Java Script, HTML/CSS,XML
- ☐ **Database :** SQL
- ☐ **IDE & Tools :** Eclipse, Git, Putty, Jenkins, Delphi 10.2, InstallShield, Visual Studio, EA, Source tree
CLion, IntelliJ, Docker
