👤 PROFILE

Innovative and driven Data Engineer with hands-on experience in developing automated data ingestion processes, enhancing system architecture, and creating interactive data visualizations. Skilled in Pyspark, Python, and SQL, with a strong understanding of DataBricks, SnowFlake, and Microsoft Azure. Proven ability to document data flows and optimize data quality, resulting in a significant reduction in manual data entry.

🎓 EDUCATION

SSC

Bhashyam public School ✍
Vizianagaram, India

MPC

Narayana Group Of Institutions ✍
2018 – 2020 | Visakhapatnam, India

B.Tech

Anil Neerukonda Institute of Technology & Sciences (ANITS) ✍
2020 – 2024 | Visakhapatnam, India

🧠 SKILLS

- Python
- Java
- Sql
- Pyspark
- Snow Flake
- Azure
- Data Bricks
- ADLS/GEN 2
- Blob Storage
- Five Tran
- DBT

📁 WORK EXPERIENCE

EasyStepIn ✍

Data Engineer (Intern)

02/2024 – present | Bangalore, India

- At EasyStepIn, Bengaluru, I collaborated with a data engineering team to develop and optimize data pipelines. I used PySpark for big data processing and implemented data transformation workflows using dbt.
- I leveraged Microsoft Azure for cloud storage, managed scalable data warehousing in Snowflake, and automated data ingestion with Fivetran. Additionally, I developed Python scripts to streamline various data processing tasks.

📁 PROJECTS

Rasa Chatbot

Involved in building an chatbot, which analyzes input and generates the output as user needed.

- Developed and deployed machine learning models for various e-commerce applications, including churn prediction, cost estimation, quality assessment, inventory management, risk analysis, and sales forecasting.
- Leveraged diverse datasets to implement predictive analytics solutions, optimizing customer retention, operational costs, product quality, stock levels, and sales performance.

Bimba

Developed a real-time data pipeline for retail analytics using Py-Spark.

- Involved in complete end-to-end development from scratch to implementation.
- Ensured the proper storing of both raw and processed data.
- Designed a medallion architecture that will capture the data from each stage and sending the data to insights.

Meepaisa - Reporting

Defined and executed the data engineering strategy aligned with Meepaisa's reporting objectives to ensure accurate and insightful reporting metrics.

- Utilized Databricks' distributed data processing capabilities to efficiently transform raw data.
- Leveraged Apache Spark (PySpark) for tasks such as filtering, aggregating, and joining datasets to prepare them for reporting.
- Stored transformed data in Snowflake, leveraging its scalability and performance for analytical workloads.

Triage Analytics Dashboard - VM02 (Telefonica) (SMIP)

- Developed and automated ETL/ELT processes, leveraging PySpark on Azure Databricks, to ingest, transform, and load data into the data lake.
