<https://www.linkedin.com/in/vamsi-krushna-lingala-83919133/>

Experienced Data Architect and Engineer, Specializing in Big Data, Cloud Solutions, and Scalable Data Systems, Empowering Real-time Insights and Operational Excellence.

Education

- 2011: B.Tech (CSE) JNTU Anantapur

Core Competencies

Big Data Engineering

Cloud Architecture (AWS, GCP)

Data Pipeline Development

Spark & Hadoop Ecosystem

Real-time Data Processing

Data Analytics & Optimization

Scalable Systems Design

Distributed Computing

ETL Workflow Automation

Agile & Scrum Methodologies

Team Building & Leadership

Soft Skills

Change Catalyst

Attention to Detail

Thought Leader

Critical Thinker

Personal Details

Languages Known: English and Hindi

Profile Summary

- Accomplished Big Data & Cloud Solutions** Expert with over 10 years of experience in architecting and optimizing large-scale distributed systems using technologies like Apache Spark, Hadoop, AWS, GCP, Kafka, and Elasticsearch.
- Cloud Cost Optimization Specialist:** Proven track record in leading cloud cost optimization initiatives, effectively reducing infrastructure expenses while maintaining high system performance and scalability.
- Advanced Data Architecture Leadership:** Expert in designing scalable, fault-tolerant data lakes, event-driven architectures, and ETL pipelines, processing petabytes of data to support real-time analytics and business decision-making.
- Real-Time Data Streaming:** Spearheaded the development of real-time data streaming systems using Apache Kafka and Spark Streaming, enabling businesses to instantly respond to live data from millions of events per second.
- End-to-End Data Engineering:** Extensive experience building end-to-end data pipelines, from data ingestion to real-time processing and storage, using technologies like Spark, Python, and Apache Airflow to ensure seamless automation and high availability.
- Cloudera Certified Hadoop Developer (CCDH):** Certified in Cloudera's Hadoop Developer certification, with hands-on experience in the Hadoop ecosystem (HDFS, MapReduce, YARN) and expertise in optimizing distributed big data systems.
- Agile Leadership & Collaboration:** Proven ability to lead agile, cross-functional teams to deliver complex data engineering solutions, ensuring alignment with business objectives and technical requirements while fostering a collaborative work environment.
- Business-Centric Data Solutions:** Known for delivering data solutions that drive tangible business outcomes, from optimizing ad spend to improving customer engagement, by transforming raw data into actionable insights through advanced analytics and data engineering techniques.

Career Timeline (Recent 5)

Since Jul'23 | O9 Solutions | Software Architect

Jan'22 - Nov'22 | Chingari | Lead Data Engineer

Sep'19 - Jan'22 | Lifesight | Senior | Data Engineer

Jan'18 - Jun'19 | Walmart Labs | Senior Software Engineer

Jun'16 - Jan'18 | Securonix | Senior Software Engineer

Work Experience

Since Jul'23 | O9 Solutions | Software Architect

- Architected and implemented the integration of the o9 Data Lake and pipeline platform, enhancing data accessibility and processing efficiency.
- Developed and integrated a Spark Profiler tool, significantly improving Spark job performance through continuous monitoring and optimization.
- Designed and deployed a robust data lake architecture, enabling large-scale data ingestion, transformation, and storage with high availability and reliability.
- Streamlined data ingestion pipelines and workflows, driving resilience and operational efficiency while reducing downtime.
- Identified performance bottlenecks and optimized resource allocation, resulting in improved Spark job performance and faster data processing.

Technical Skills

- ⌕ Java
- ⌕ Hadoop
- ⌕ Spark
- ⌕ Python
- ⌕ Elastic Search
- ⌕ Kafka
- ⌕ Redis
- ⌕ InfluxDB
- ⌕ Apache Airflow
- ⌕ SQL

- ⌕ Provided expert technical guidance to cross-functional teams on Spark and data lake best practices, elevating team proficiency and project outcomes.
- ⌕ Ensured solutions were in alignment with business objectives, compliance standards, and governance frameworks, safeguarding data integrity and security.

Jan'22 – Nov'22 | **Chingari** | Lead Data Engineer

- ⌕ Designed and implemented the complete architecture of the platform, ensuring scalability, reliability, and performance.
- ⌕ Developed the end-to-end platform, integrating multiple components for seamless data processing and storage.
- ⌕ Wrote Spark Streaming jobs to efficiently read data from diverse data sources, processing and storing information in real-time.
- ⌕ Created Java client code for seamless interaction with InfluxDB, Redis, and Kafka, ensuring smooth data flow and integration.
- ⌕ Onboarded various services to the platform, handling millions of events per minute with high throughput and minimal latency.
- ⌕ Collaborated effectively with cross-functional teams to ensure successful event onboarding, aligning platform capabilities with diverse service requirements.

Sep'19 – Jan'22 | **Lifesight** | Senior | Data Engineer

- ⌕ Led product development using Java, Hadoop ecosystem, and Spark, delivering robust data processing solutions.
- ⌕ Developed daily batch jobs to read data from multiple sources, storing mobility information and scheduling them via Apache Airflow for automation.
- ⌕ Generated user-specific insights from vast datasets, enabling targeted and personalized business decisions.
- ⌕ Created monthly jobs to generate audience segments, aiding in optimized ad spend and better business decision-making.
- ⌕ Integrated audience data with Elasticsearch, enabling efficient querying and real-time access within the platform.
- ⌕ Managed and processed petabytes of data, ensuring scalability, performance, and reliability in large-scale data operations.

Jan'18 – Jun'19 | **Walmart Labs** | Senior Software Engineer

- ⌕ Designed and implemented data pipelines to efficiently transfer data from various sources to Splunk for real-time analysis.
- ⌕ Developed data parsing logic to ensure accurate and structured data processing.
- ⌕ Created data filtering mechanisms to refine and ensure the quality of data being ingested.
- ⌕ Successfully integrated and pushed processed data into Splunk, enabling enhanced monitoring and analytics capabilities.

Jun'16 – Jan'18 | **Securonix** | Senior Software Engineer

- ⌕ Developed products using Java and Hadoop ecosystem technologies, including Spark streaming with Kafka.
- ⌕ Implemented Counters for tracking data processing metrics.
- ⌕ Managed Kafka offsets effectively to ensure smooth Spark job execution.
- ⌕ Utilized HBase for scalable and efficient data storage.
- ⌕ Integrated Redis as an in-memory database for cache management.
- ⌕ Extensive experience in leveraging Kafka as a robust message queue solution.

Previous Work Experience

Jun'15 – Jun'16 | **IBM** | Senior Software Engineer

Sep'13 - Jun'15 | **3D PLM** | Software Engineer

Jul'11 – Sep'13 | **Napa India** | Software Developer

Project Annexure

O9 Integration Platform

Role: Software Architect

Company: O9 Solutions

Team Size: 12

Technology: Python, Spark, AWS, GCP, Pyspark

Description: Developed a scalable data ecosystem that integrates the o9 Data Lake with an interactive drag-and-drop pipeline platform. The platform streamlines data ingestion, processing, and analytics, enabling seamless creation and management of ETL workflows. A custom-built Spark Profiler was integrated for detailed monitoring and optimization, ensuring high performance and efficient resource usage. The architecture emphasizes scalability, data consistency, and governance compliance, supporting real-time insights and operational excellence.

Event Service Platform

Role: Lead Data Engineer

Company: Chingari

Team Size: 4

Technology: Java, Spark, AWS, Athena, InfluxDB, Pyspark

Description: Built a high-performance, scalable, and durable event streaming platform capable of ingesting gigabytes of events per second from multiple sources. The system processes data in near real-time, providing instant insights for event-driven applications. This platform ensures that data is available in milliseconds, enabling businesses to react quickly to changing events.

Lifesight Audiences Platform

Role: Senior Data Engineer

Company: Lifesight

Team Size: 4

Technology: Java, Spark, Google Cloud Platform (GCP), Apache Airflow, Elastic Search

Description: Developed a platform that enables businesses to leverage real-world consumer data for enhanced analytics and ad spend optimization. The system profiles consumers based on offline affinities, creating segments for targeted marketing. These audience segments are activated through DSPs/DMPs, driving more effective marketing strategies by ensuring the right consumers are reached.

Managed Log Search

Role: Senior Software Engineer

Company: Walmart

Team Size: 10

Technology: Java, Spark, Kafka

Description: Created a managed log search service for Walmart, utilizing Splunk as the search platform. The system ingests large data sets from diverse sources, providing search, alerting, and monitoring capabilities. This service enhances operational visibility by enabling quick access to logs across different teams within the organization.

SNYPR

Role: Senior Software Engineer

Company: Securonix

Team Size: 13

Environment: CDH5

Technology: Java, Spark, Kafka, HBase, Redis, Solr

Description: Contributed to the design and development of the UEBA (User & Entity Behavior Analytics) product suite within the SNYPR platform. The solution uses big data technologies such as Spark, Kafka, HBase, and Redis to detect threats and analyze user behaviors. The platform supports large-scale data processing and provides advanced security analytics to detect and respond to security incidents.
