Summary

Detail-oriented Software Developer with over 2.5 years of experience in full software development lifecycle, specializing in C#, .NET, and SQL Server. Proven ability to adapt to new technologies and work collaboratively in high-pressure environments. Strong background in API integration, including e-invoice solutions, with a focus on enhancing organizational efficiency.

Work Experience

Bhargavi Soft-Tech Pvt Ltd (India)
Software Engineer

Bangalore, India
(May 2022- Present)

Project: SEED - Smart ERP & E-Invoice Integration.

ERP is used by medium scale manufacturing industries and SEED is used by small scale manufacturing industries for Inventory, Accounts, Human Resource planning, Raw-material Scheduling, Planning and Production.

Developed an e-invoicing solution that allows one-click invoice generation through third-party APIs, improving user experience for small and medium-scale manufacturing industries.

Technologies: Winforms, .Net, C#, SQL server, API Testing, VB6.

- Designed and developed both front-end and back-end components of the SEED ERP system.
- Conducted API testing using Postman to ensure reliable integration with e-invoice systems.
- Created and validated JSON requests/responses for seamless data communication.
- Developed and executed data-driven test cases using external data sources like Excel.
- Engaged in project planning, estimations, and understanding client change requests to enhance system functionality.

Education

Bachelor of Computer Application

Seshadripuram Academy of Business Studies (2016 - 2019)

Responsibilities

- Design, develop, and maintain applications using C#, .NET, and WinForms.
- Write clean, scalable, and efficient code in C# and VB6.
- Develop user-friendly interfaces using WinForms for desktop applications.
- Implement UI enhancements based on user feedback and usability testing.
- Design and optimize SQL Server databases. Write and execute SQL queries to retrieve and manipulate data.
- Develop and consume RESTful services and APIs for seamless data exchange.
- Ensure proper integration with third-party services as needed.
- Conduct unit testing and integration testing to ensure software quality.
- Identify and fix bugs, performance issues, and security vulnerabilities.
- Create and maintain technical documentation for software design, functionality, and usage.
- Document code and project specifications for future reference.
- Work closely with cross-functional teams, including designers, testers, and project managers.
- Participate in code reviews and provide constructive feedback to peers.

- Utilize GIT or other version control systems to manage code changes and collaborate with team members.
- Provide ongoing support and maintenance for existing applications.
- Address user-reported issues and implement necessary updates.
- Participate in Agile ceremonies such as sprint planning, daily stand-ups, and retrospectives.

Skills

- Programming Languages: C#, SQL, VB6
- Frameworks & Technologies: .NET, Winforms, RESTful Services
- Tools: Postman, Visual Studio, SQL Server, GIT
- Methodologies: Agile, Test-Driven Development
