Automation for Dayzim Details Match:

- Prepare SDD from PDD.
- Analysis, design and develop the solution.
- Perform unit test and Dev test.
- Deploying the solution into client machine.
- Provide support for UAT and Production.

Projects/Product:

- Bot downloading the Xml file from web application and de-serializing the xml file and add to data table. Calling the API(Get) for access token authentication then again calling API(post) to compare user First, Last names of **GEKO** database with First, Last name of XML data. If user First, Last names match bot will update in excel as "Match" else "not match". Loop will repeat for all users of XML data then send email to business along with report, Geco for Dayzim

Quality Health Claim of Extraction for Autodesk:

- Gathering detailed requirements from Client for business requirements.
- Design, build, and maintain efficient, reusable, and reliable Automation.
- Facilitating Integration and User Acceptance Testing.
- Involved in deployment of automation in users environment.

Projects/Product:

- The client uses MS Excel, and maintains their Invoice id, member id, first name, last name, dob and date of service. However it is not possible them to share the data from multiple system in multi user environment, there is lot of duplicate work, and chance of mistake and no security. This Billing System is used to overcome the entire problem which they are facing currently, and making complete atomization of manual billing.

Sodexo services ltd, France to Orchestrator support:

- Create tenants and allocate the licenses to tenants, Robot's, Developers.
- Setup UiPath assistant in UAT, Prod Vm's and configured with orchestrator.
- Create Processes and upgrading the packages if new packages published.
- Create and maintain the triggers, queues and assets.
- Daily checking all Jobs in production are running fine or are there any anomalies detected in any processes. If yes, reporting those to the client and taking respective measures to bring it in the right working mode.
- Daily Checking logs and Manage/investigate exceptions to ensure business continuity.
- Daily participating in stand up call with team. Working as an individual as well as team player to achieve all UiPath support tasks.
- Resolving all the RPA platform related issues and delivering all the requirements as per

defined time frame.

- Updating and closing all the JIRA stories allocated to me on time and as per given time frame.
- Communicate issues with teams and resolve the issues.

Internal Leaver Process for Sodexo services ltd, France:

- Prepare SDD from PDD.
- Analysis, design and develop the solution.
- Perform unit test and Dev test.
- Deploying the solution into client machine.
- Provide support for UAT and Production.

Projects/Product:

- Bot launch and login into web application downloaded the excel file. Bot will open excel file and prepare input excel sheet with required data. Launch and login into web application and get the user id from the excel then search the user in web app. If user found bot remove access and update in excel "access removed". If user not found bot update the status in excel "user not found". Same process repeat for multiple web apps. Then get the task id from the excel and open the task and perform the task sign Off. Repeat same process for all task id's and sent email to business team along with excels report.

Automation for MasterCard:

- Gathering requirement from BA.
- Analysis, design and develop the solution.
- Supporting to the team members and resolving the issues, if they have issues.
- Performing unit test and written test cases for unit test.
- Deploying the solution into client machine.
- Provide support for UAT and Production.

Projects/Product:

- Automation for Customer Configuration, Merchant Registration for MasterCard Here the BOT has to select task from web application and it has to download the attachment then has to extract the data from excel, then has to submit the extract data into windows based application and has to generate Unique id. This unique id has to submit into web application.
