

Venkatesh Rongala

• +91 - 9866180405 • venkateshrongala1@gmail.com • LinkedIn • GitHub • Kakinada, India

CAREER OBJECTIVE

- Proficient in implementing CI/CD pipelines using Jenkins. Acquired knowledge & experience in cloud technologies - AWS & Azure & Trained with demonstrated experience in using advanced 5+ DevOps tools & technologies, including Git, Docker, Jenkins, Kubernetes, Terraform, Ansible & Linux Shell scripting.

SKILLS AND TOOLS

- **DevOps Tools:** Git, Jenkins, Ansible, Docker, Kubernetes, Terraform.
- **Logging & Monitoring Tools:** Nagios, Grafana, Prometheus & ELK
- **Cloud Platforms:** AWS (Core services: EC2, IAM, S3, ELB, EBS, VPC, Route53, RDS, SQS, SNS, Lambda), Azure (Services: Blob Storage, Virtual Machines, Networking, Monitoring, RBAC, Functions, Key Vault)
- **Operating Systems:** Linux, Windows
- **Programming Language:** Shell Scripting
- **Other Skills:** Agile Methodologies, Communication Skills, Security Best Practices

Work Experience

Intellipaat Software Solutions Pvt ltd | Cloud & DevOps Intern | 03/2023 – 03/2024

- Developed a Git Workflow, automatically triggering Code Build upon each commit made to the master branch, conducting tests & pushing into production.
- Analyzed project needs and constructed a Kubernetes cluster from the ground up using minikube on AWS.
- Employed Amazon EC2 to effortlessly launch & configure virtual servers, expertly handling security, networking & storage management aspects.
- Implemented an intelligent system to easily adapt to changes in requirements or sudden surges in popularity and Increased customer retention by 20%
- Leveraged the scalable features of Amazon EC2, Auto scaling, RDS, MySQL, & PHP to deliver a truly optimized experience.
- Established & expertly managed Linux servers on Amazon, including EC2, EBS, ELB, Security Groups, RDS, & IAM.
- Leveraged a wide range of cutting-edge technologies, such as EC2, ELB, VPC, S3, RDS, Route 53, Lambda, SNS, SQS, Cloud Trail and Cloud Watch & enabled the achievement of the desired outcome.

Jr Data Analyst | cyient limited | 03/2020 - 10/2022

- Interpreting data, analyzing results using statistical techniques. Developing and implementing data analyses, data collection systems and other strategies that optimize statistical efficiency and quality.
- Worked on GIS and automotive projects, leveraging tools like AutoCAD and GAMS for data visualization and validation & Captured and transformed real-world data into valuable insights using 'INSIGHT 360'.

PROJECTS

DevOps Project

- Implemented a DevOps lifecycle ensuring zero changes in Docker containers within the testing environment. Automated application container deployment, scaling, and operations across multiple host clusters.
- Forked <https://github.com/hshar/website.git> . Created EC2 instance and installed Terraform. Configured script for K8 master and 2 slaves. Connected K8s master, installed Ansible, and connected slaves. Used YAML script to install Jenkins, Docker, K8s, and Java on respective machines. Accessed Jenkins webpage and formed K8s cluster.
- Created Jenkins node and obtained credentials for job execution. Developed a new Docker file in a repository. Created a job, "test-pipeline," and configured the pipeline script with credentials and the GitHub repository link.
- Created deployment.yaml and service.yaml files in website1 to set up the Nginx deployment and node port service.
- Configured a pipeline script to create the deployment and node port, and push the image to Docker Hub.
- After a successful build, the Docker image is pushed to Docker Hub, and the service is accessed on the browser via the IP address and port number. Finally, the webhooks for the website1 repository are activated to trigger the build automatically when changes are made to the code.
- Deployed and managed the ELK (Elastic search, Log stash and Kibana) stack for centralized logging and analytics.

AWS Project | Deploying a Multi-Tier Website Using AWS EC2

- Deployed an EC2 instance and installed the Apache2 web server. Uploaded an index.php file to the Ubuntu machine, copying it to the Apache2 default page location (/var/www/html).
- Encountered an error upon entering the IP address on the website to input user details.
- Created a MySQL database named intel in the RDS instance, establishing a data table within it.
- Connected to the database, installed the MySQL client, and listed databases.
- Created tables within the intel database to input user details.
- Displayed the web page without errors and successfully stored inputs in the database.
- Created an AMI of the EC2 instance and established a launch configuration using the AMI.
- Created an Auto Scaling group with a desired count of 2 instances.
- Entered user details and listed the corresponding database entries

Azure Administrator | Capstone Project

- Deployed three web pages: the default home page, an upload page for Azure Blob Storage, and an error page for 403 and 502 errors.
- Configured the Application Gateway: 'Example.com' is directed to the home page, while 'Example.com/upload' is directed to the upload page.
- Linked Application Gateway's error pages to 'error.html' hosted as a static website in Azure Containers, sourced from the GitHub repository (<https://github.com/venkateshronqala/AZUREazproject.git>).
- Created a container upload and executed the script on the VMs (via ./vm1.sh and ./vm2.sh) to install the home page and error page.
- Edited the Config.py file with the Access key and account name obtained from the storage account.
- Ran sudo python3 app.py to install the final code from the repository.
- Created a Traffic Manager with URLs (<http://mytrafficmanager123.trafficmanager.net>) redirecting to the home page and (<http://mytrafficmanager123.trafficmanager.net/upload>) Redirecting to the upload page.

Amazon Web Services (EC2, ELB, VPC, S3, RDS, Route 53, Lambda, Cloud Watch, SNS, Cloud Formation etc.)

- Established and expertly managed Linux servers on Amazon, including EC2, EBS, ELB, Security Groups, RDS, and IAM.
- Created and upgraded AMI/Snapshots/Volumes, and set up and managed 4-5 VPC subnets, facilitating seamless connections between distinct zones.
- Leveraged a wide range of cutting-edge technologies, such as EC2, ELB, VPC, S3, RDS, Route 53, Cloud Watch, SNS, enabling the achievement of the desired outcome.

Education

- B. Tech Mechanical Engineering | Aditya College of Engineering & Technology | 2017 | 75.46%
- Diploma in Mechanical Engineering | Govt. Polytechnic, Jangareddygudem | 2014 | 78.76%

CERTIFICATIONS

- Cloud Computing and DevOps Certification - Intellipaat
- AWS Solutions Architect Associate - Intellipaat
- Microsoft Azure Administrator - Microsoft
- Introduction to Containers – AWS
- Docker Essentials: A Developer Introduction - IBM
- AutoCAD Expert - AutoDesk
