EXPIERENCE SUMMURY

An IT professional with overall experience of **2.8** years and working as a member of DevOps team in the company and playing the role of a DevOps and Cloud Support Engineer.

ACADEMIC QUALIFICATIONS

Bachelor of Engineering from Sahyadri Collage of Engineering and Management, Mangaluru under Visvesvaraya Technological University, Karnataka

TECHNICAL SKILLS

- Version control system Git, Bitbucket
- Cloud Platforms AWS
- Configuration management Ansible
- Build Tool Maven
- Continuous integration tool Jenkins
- Orchestration tools Docker, Kubernetes
- Scripting Shell scripting
- Application server Apache
- Infrastructure as a Code Terraform
- Monitoring Tool Grafana

PROFESSIONAL EXPIERENCE

DevOps Engineer

Vidyut Info Solutions Pvt Ltd

05-2021 - Present,

Bengaluru

PROJECT DETAILS

- DHL migration on premise microservice

This project involves a customer-facing system for tracking cargo details via a mobile app or web browser, with data processed through AWS Cloud. The system uses VPCs, internet gateways, and VPC peering for network connectivity. It employs an Application Load Balancer for managing incoming traffic, microservices, RDS for data storage, and micro instances for service integration. CloudWatch monitors the system, and an S3 bucket stores media inputs. Additionally, a monitoring tool, Splunk, is used in the DHL data center for log analysis.

ROLES AND RESPONSIBILITIES

- Applied extensive knowledge of GIT and Bitbucket for effective source code management.
- Ensured secure Git repositories and SSH key management on GitHub
- Took ownership of creating High Availability setups for applications using Docker, ensuring reliability and performance.
- Designed and maintained automated CI/CD pipelines using Jenkins, aligning them with business requirements.
- Utilized Kubernetes for creating dashboards, managing pods, config maps, and deploying applications into the cluster.
- Leveraged AWS services, including IAM for role creation, EC2 for VM & instance management, and other core services like EBS, S3, ELB, RDS, CloudFront, and Elastic Cache.
- Implemented Infrastructure as Code principles using tools like Ansible to manage and automate server and application configurations.
- Implemented and optimized AWS Infrastructure services (EC2, VPC, ELB, S3, EKS, ECS, RDS, CloudFront) for scalable and efficient solutions.
- Utilized build utilities like Maven for the efficient building of jar, war, and ear files.
- Worked closely with developers to establish a robust development pipeline, facilitating code deployment to various environments.
- Took ownership of production and non-production alerts, proactively resolving infrastructure incidents to maintain system stability.
- Exhibited strong analytical and problem-solving skills, being a good team player with effective interpersonal and communication skills.

DECLARATION

I hereby declare that the information furnished above is true to the best of my knowledge.
