

SKILLS

- MySQL, Microsoft Excel, Python, Tableau, Data Analytics and Visualisation - Python Libraries, Numpy, Pandas, Stats and Probability, Data Analytics and Visualisation - Fundamentals, Knime

EXPERIENCE

Data Analyst

Apr 2024 - Present

Jana Small Finance Bank

- Utilized Oracle databases to extract and process financial data, ensuring efficient data retrieval and management through advanced SQL queries.
- Implemented KNIME models to analyze data, detect fraud, and assess loan eligibility, improving decision-making accuracy.
- Enhanced fraud detection models in KNIME, boosting the identification of suspicious activities by 30-40% through statistical analysis.
- Established checkpoint mechanisms in KNIME workflows, increasing transactional efficiency by 45-50% to meet RBI guidelines.
- Generated daily reports from KNIME models, providing actionable insights into financial transactions and risks for stakeholders.
- Collaborated with stakeholders to align reports with business objectives and regulatory standards, ensuring accuracy and relevance.

Data Analyst

Feb 2022 - Jul 2023

Wipro Limited

Bangalore, India

- Monitored and addressed cybersecurity threats, reducing incident response time by 30% through proactive data analysis and early threat detection.
- Utilized SQL and advanced Excel for data extraction and reporting, improving efficiency by 40% and enabling faster decision-making.
- Ensured 100% server compliance with security update protocols, reducing vulnerabilities by 20% across the infrastructure.
- Delivered interactive dashboards to clients, increasing client satisfaction by 25% and providing real-time insights on server health and threat mitigation.

PROJECTS

Enhancing User Satisfaction for Over the Top (OTT)

https://github.com/Vikrant4298/Netflix_Business_case

Description :

- Utilize Python libraries Pandas, Matplotlib, and Seaborn in Jupyter Notebook to analyze OTT platform data.
- Objective: Enhance user satisfaction and retention by optimizing content recommendations and platform performance.
- Focus on director, title, release year, added year, genre, etc., to understand user viewing habits and preferences for targeted optimization efforts.

Expected Deliverables:

- Comprehensive Analysis Report: Document the analysis process, methodologies employed, key findings, and recommendations in a detailed report format.
- Data Visualizations: Present visualizations of key insights and trends using Matplotlib and Seaborn to support analysis findings.

Tools : Python, Pandas, Matplotlib, seaborn, Jupyter Notebook
