SUMMARY

Versatile software developer experienced in collaborating across teams to drive projects from concept to deployment.

SKILLS

- Technical Skills: C, C++, Python, Go, Shell script, Linux
- Cloud Orchestration Skills: Helm, Kubernetes, Docker.
- Tools: Git, Confluence, JIRA
- Languages: English, Kannada, Hindi, Punjabi

EXPERIENCE

NOKIA NETWORKS PVT. LTD - [Bangalore]

May 2022 - Present

R & D Engineer

- Successfully conducted research and developed features on Equipment Identity Register (EIR) and IMEIDB products.
- Executed the entire product implementation process, transforming it from a Virtual Machine (VM) architecture to a Cloud-Native Network Function (CNF) pod for IMEIDB using Docker, helm and Kubernetes.
- Conducted a seamless OS transitioning the system from CentOS to Rocky Linux.
- Integrated third-party applications like SAMv5 package, Filebeat and Logstash to enhance EIR, MNP, and IMEIDB functionalities in VNF to improve the log management process, while also strengthening security by enabling TLS across the product, all under the purview of Data and Network Security (DFsec).
- Enhanced the product's log management process in CNF environment, optimizing log rotation and housekeeping procedures for increased efficiency of log management by 40%.
- Automated regular product maintenance to reduce the manual effort by 30%, ensuring seamless OS upgrades with each release, and significantly reducing vulnerabilities for enhanced security.
- Increased the efficiency of the product by 25%, reducing one of the containers of the EIR app pod and merging it with the app container using docker files and seamlessly integrating the functionalities of the removed container.
- Within the realm of OAM containerization, focused on reducing CPU load to effectively minimize CPU utilization, resulting in improved system performance and resource efficiency.
- Effective communication with external teams while addressing customer issues in various areas of the product.
- Enhanced the security of the code by adding the fPIC, fPIE and stack-protector flags during compilation of code so that the executables and libraries are generated with position independent code.
- Gained hands-on experience of deployment in CNF using helm charts and VNF in OpenStack and VMWare Platforms.

ALTRAN - [Bangalore]

August 2019 - April 2021

Software Engineer

- Worked on multiple Adtran Wi-Fi routers like 834-5, 841-t6, 854-v6 and SR400AC while collaborating with external teams and addressing their requirements.
- Implemented various functionalities like speed test, LED behavior using opensource code to configure the settings for the Wi-Fi devices.
- Employed C++ and Bash to engineer essential modules, aligning them with exacting business specifications and adhering to Agile practices. Provided ongoing maintenance and support.
- Collaborated with clients and diverse teams, including production support, customer support, and third-party vendors, to resolve critical technical challenges.
- Participated in code reviews, technical discussions and planning to execute the given requirements on time.
- Analyzed the FRV test reports and running/modifying the test scripts which are used to test the features of the product extensively which strengthened the product testing by 30%.
- Resolved the customer issues raised on the product on active or legacy code.

EDUCATION

NEW HORIZON COLLEGE OF ENGINEERING, Bengaluru

August 2015 - July 2019

Bachelor of Engineering [B.E]

- Major in Computer Science & Engineering
- Graduated with 9.23/10 CGPA
