WORK EXPERIENCE

Tata Technologies Solution Developer - Generative AI	Pune, Maharashtra Mar 2024–Present
As a Solution Developer with a focus on Generative AI, I collaborated with the Tata Motors team to design and implement innovative solutions. Here are some highlights of my projects:	
Scalable LLM Serving: I designed and deployed a self-hosted LLM inference framework that could handle over 1024 concurrent users, taking it from a proof-of-concept to a scalable solution. LLM Performance Monitoring: I set up continuous monitoring of key metrics like throughput speed, request per second, and more, ensuring our LLM was always running smoothly. LLM Observability & Evaluation: To optimize performance, I built a system to observe and evaluate our LLM, helping us identify areas for improvement and troubleshoot issues. Autonomous Data Analysis: I created a workflow that enabled autonomous data analysis, including data evaluation, chart generation, code creation, and summarization of findings - all accessible through a web browser. RAG Pipeline: I developed a complex pipeline for extracting table-based data from Vehicle Components Specification PDFs, and applied RAG to various use cases, such as vehicle sales assistance, service center fault analysis, and more.	
Tech Mahindra Software Engineer	Pune, Maharashtra July 2021– Mar 2024
As a Software Engineer at Tech Mahindra, I have been working on various projects under the New Age Delivery (NAD) project, focusing on applying Generative AI and Machine Learning to drive innovation and efficiency gains. My key achievements include:	
Generative AI: - Developed and deployed a User Story Generator API using Large Language Models (LLMs), resulting in significant time savings (30% reduction in manual efforts). - Implemented a Code Documentation Generator using Generative AI, resulting in a 30% reduction in manual documentation efforts. - Developed and deployed a PDF-based question answering API using Langchain, VectorDB, and Generative AI.	
Machine Learning: - Implemented Alops functionality to monitor server health and detect anomalies, leveraging Machine Learning algorithms to reduce server downtime. - Improved the accuracy of the Service Ticket Classification API by 15% using Machine Learning algorithms. - Created a streamlined algorithm for the RMG associate’s recommendation API, reducing manual errors by 15% using Machine Learning algorithms.	
Big Data and Data Analysis: - Led a high-performing Power BI team to develop data-driven solutions - Worked with Big Data frameworks, such as Hadoop and Hive, to support various initiatives - Managed databases, including MySQL, to support data-driven solutions	

EDUCATION

AISSMS IOIT	Pune, Maharashtra
BE in Electronics and Telecommunication Engineering	Graduation Date: June 2016 - May 2020
Bhairavnath Collage, Bhosari	Pune, Maharashtra
12th Science	Completion Date: June 2014 - May 2016

SKILLS & INTERESTS

Skills: Python, LLM, Llama, Machine Learning, Deep Learning, Transformers, Power BI, Excel, ETL, Docker, Linux, Shell scripting, Scikit Learn(Sklearn), elastic.co, OpenCV, NumPy, Pandas, NLTK, Amazon EMR, Airflow, HDFS, Data Warehouse, Clickhouse, Hive, MongoDB, SQL, Kafka, AWS, Azure.

Interests: Playing Video Games, Watching Anime, Drawing sketches.

ACHIVEMENTS

- Secured 3rd Rank in Texas Instrumentation organized Drishti Contest.
- Got appreciated with the “Bravo” Award in Tech Mahindra.
- Got appreciated with “Pat on The Back” in Tech Mahindra.
- Got “Best team” award in Tech Mahindra.
- Got appreciated with “Pat on The Back” (Again) in Tech Mahindra.
- Got appreciated with the “Bravo” Award in Tech Mahindra.
- Over the past two years, I have consistently achieved the highest rating in project evaluations during the performance feedback cycle.
