EXECUTIVE SUMMARY

Experienced Data Engineer with 3+ years of experience specializing in data migrations, orchestration, optimization and integration across various platforms. Strong knowledge in Python. Skilled in developing Airflow DAGs, leveraging GCP services (BigQuery, Cloud Composer, Data Fusion, Dataflow) and automating ETL with Azure Data Factory and Databricks. Proficient in designing and implementing scalable data solutions using BigQuery, Composer, Data Fusion and Dataflow. Recognized for driving efficiency and cost optimization in complex data ecosystems. GCP and Azure certifications along with SPOT Award

EXPERIENCE

3 Years

Datametica Birds

DEC 2021 - Present

Project Name - Data Modernization from AWS Redshift To GCP Bigquery

Role - Engineer I

Responsibilities:

- Led the modernization of data infrastructure from AWS to Google Cloud for the world's leading digital invitation platform with over 120 million users. Implemented a new data architecture on GCP, eliminating dual-cloud dependencies. Migrated data, converted components, and implemented new data pipelines. Repointed reports, orchestrated workflows, and conducted comprehensive testing. Provided end-to-end support for deployment, testing, and knowledge transfer, ensuring a smooth transition to GCP.
- Developed a dynamic Airflow DAG for incremental data loading from GCS to BigQuery with parallel task execution and built-in data integrity auditing. Designed a shell script to automate DTS job triggers for loading data from Redshift to BigQuery, ensuring parallel execution and data accuracy
- Collaborated with a media company to migrate an AWS Lambda ETL Python pipeline to a GCP Cloud Function. Implemented an ETL pipeline in GCP Cloud Run using Python to fetch data from Facebook and YouTube APIs, retrieving metrics like impressions, likes, dislikes, and subscribers.
- Implemented a BigQuery remote function using Cloud Run to overcome the limitations of unavailable Python libraries in BigQuery's JavaScript UDFs.

Project Name - AWS to GCP BigQuery Migration Project

Role - Associate Engineer II

Responsibilities -

- Conversion and successful implementation of DBT models and Spark jobs on the GCP BigQuery platform, streamlining data transformation workflows and enhancing data processing efficiency.
- Managed the historical data load from AWS S3 to GCP BigQuery, ensuring seamless data migration with high accuracy and integrity. Designed and optimized data pipelines for in-scope DBT models and Spark scripts on GCP, improving data processing performance.
- Integrated existing MODE reports with BigQuery, ensuring reporting continuity and enhancing data visualization capabilities.

- Generated detailed performance comparison metrics for ETL processes and MODE reports, showcasing the improvements achieved post-migration.
- Conducted a solution expo to assess the compatibility of DBT Python modules with BigQuery and evaluated CI/CD capabilities within GCP.

Project Name - SQL Server and Snowflake to GCP BigQuery Migration Project

Role - Associate Engineer II

- Conversion of SQL Server and Snowflake database objects, including Tables/Views DDLs, Stored Procedures, into GCP compatible, optimizing for compatibility and performance along with converted SSIS packages into stored procedures.
- Successfully migrated historical data from SQL Server, Snowflake to BigQuery, establishing a reliable data ingestion pipeline for daily loads using GCP tools like Dataflow, BigQuery Load.
- Implemented a robust orchestration and scheduling framework using Cloud Composer to automate and streamline workflows across multiple data sources, including Snowflake and MySQL databases.
- Provided comprehensive User Acceptance Testing (UAT) support, including data validation and parallel runs using Pelican, ensuring the accuracy and reliability of the migrated data. This culminated in a fully optimized, cloud-native data infrastructure on GCP.

SKILLS

Programming Languages: Sql, Python, Shell scripting | Databases: MySql, BigQuery, MongoDB, NoSQL, OLTP, OLAP, RDBMS | Cloud platforms: Google Cloud Platform (GCP), Microsoft Azure, Snowflake, Amazon WebServices (AWS) | Workflow management: Airflow | Google cloud services: Dataplex, Dataform, Dataflow, Bigtable, BigQuery API, Gcloud CLI, Composer, Google Cloud storage (GCS), PubSub, Dataproc, Cloud Function, Google Cloud Python SDK, Datastream, Cloud Scheduler | Versioncontrol: Git, GitHub | Linux: Ubuntu, Debian | Azure services: Data factory, Databricks, Functions, Blob, Synapse, Delta Lake | Files types: CSV, Parquet, Avro, Json | Other: Dbt (databuild tool), XML, Data pipeline, Data modeling, Data quality, ETL, ELT, Data Warehousing, Data structure and algorithms, Data injection, Data processing, Gen AI, Excellent english communication

Education

Bachelor Of Engineering (Mechanical) at Pune University

Percentage: 61 %

ACHIEVEMENTS

Recognized with SPOT Awards at Datametica Solutions Private Limited for outstanding performance: Oct 2024
