PROFESSIONAL SUMMAMRY

Seeking an entry-level AWS DevOps Engineer role in a forward-thinking organization to leverage my skills in cloud computing, AWS, and DevOps practices. With a focus on contributing to the efficient delivery and improvement of software applications, I aim to gain practical experience in automation, cloud infrastructure, and continuous integration/continuous deployment (CI/CD).

SKILLS

DevOps Tools Integration:

- Seamlessly incorporated a variety of DevOps tools, including **Jenkins, Docker, Kubernetes, Ansible, and Terraform**.
- Demonstrated proficiency in **Python and Bash/Shell Scripting** to optimize workflows.
- Must be proficient in writing, debugging, and maintaining automation, scripts, and code (**i.e., Bash, Ansible, and Python, Java, or Golang**).

AWS Cloud Infrastructure Contribution:

- Leveraged **AWS/Azure** services **EC2, S3, VPC, IAM**, and architectural concepts like Scalability and High Availability for a robust cloud infrastructure.

Version Control and Collaboration:

- Applied **Version Control system**, with hands-on **GIT** experience for effective code management and collaboration on **GITHUB**.
- Utilized Microsoft Teams to enhance collaboration and communication within the development team.

CI/CD Pipeline Optimization:

- Ensured efficient **CI/CD pipelines** using **Jenkins** for automation and release management.
- Integrated **Maven** for **Build Automation** and **Dependency Management**, optimizing various build tasks.

AWS/Azure Architect Expertise:

- Demonstrated expertise as an **AWS Architect**, showcasing proficiency in **AWS CLI, SDKs**, and services like **ROUTE 53, IAM, Security Groups, Encryption**.

Linux Administration and Automation:

- Managed Linux distributions, server administration, and troubleshooting, utilizing **Ansible** and **Shell Scripting** for automation.

Containerization and Orchestration:

- Created and deployed **Docker Containers**, utilizing **Docker files** for building images, managing volumes, and networks.

Infrastructure as Code with Terraform:

- Designed and implemented **Terraform Scripts** for efficient deployment and management of AWS resources, adhering to Infrastructure as Code (IAC) principles.

AWS Services Proficiency:

- Demonstrated hands-on experience with **AWS EC2, ROUTE53, S3, ELB, EBS, AMI, VPC, and Auto scaling, GCP**

Resource Management and Optimization:

- Effectively managed disk space, processor utilization, and network utilization related to server performance.

Database Management:

- Knowledge of cloud-based databases (**RDS, DynamoDB, BigQuery**) and **NoSQL** technologies.

Disaster Recovery & Backup Solutions:

- Knowledge of designing robust backup and disaster recovery strategies in the cloud.

Programming Skills:

- Strong programming skills in **scripting, Go, Python, C/C++, Java**, or similar languages.
-

TOOLS | TECHNOLOGIES

- Jenkins
- Docker
- Python
- Ansible
- Terraform
- Kubernetes
- Shell Scripting
- EC2
- S3
- VPC
- IAM
- Git
- GitHub
- Route53
- CloudWatch
- Maven
- AWS Lambda

EDUCATION

Bachelor's in Computer Application (BCA)- (8.5/10)	2024
Jain (Deemed to be University) Bangalore	
PUC (PCMC)- (46%)	2012
Seshadripuram PU Composite College Bangalore)	
SSLC - (63%)	2010
Sri Vidya Mandir Education Society Bangalore	

CERTIFICATES

- AWS Solutions Architect – **MicroDegree**
- DevOps Professional – **MicroDegree**

PROJECT AT MICRO DEGREE INTERN

Cloud-based Application Development

- Developed a cloud-based application using **AWS** services such as **EC2, S3, and RDS**.
- Implemented an automated deployment process using **AWS Cloud Formation**.
- Designed and implemented a scalable architecture to handle high traffic loads.

Automated Deployment Pipeline

- Designed and implemented a CI/CD pipeline leveraging **Jenkins, Git, and Docker** to automate web application deployment.
- Leveraged Docker containers to ensure consistency across testing and production environments.
- Reduced deployment time by 60% and minimized human errors.

Configuration Management with Ansible

- Employed **Ansible** to automate the configuration of multiple web servers in a load-balanced environment.
- Wrote Ansible playbooks to ensure consistent server setup and application deployment.
- Enhanced system stability and minimized manual configuration efforts.

DECLARATION :

I hereby declare that the information provided above is accurate to the best of my knowledge.
