Summary

I am a highly skilled and experienced Blockchain Developer with over **3 years of expertise in Web Apps, Mobile Apps, and Blockchain development**. Throughout my career, I have successfully delivered robust applications and completed various projects in the Blockchain field, including the development of NFT Marketplaces like OpenSea, NFT Gaming platforms, Fantasy Leagues, and more. My knowledge of **Solidity and proficiency in NFT standards such as ERC20, ERC721, and ERC1155** have allowed me to create innovative solutions for clients. Additionally, I am proficient in technologies like **Web3.js, Ether.js, IPFS, React.js, Rust and smart contracts**.

Education Background

- **Veer Bahadur Singh Purvanchal University Jaunpur U.P.**
Department- Computer Science
Master of Computer Applications- MCA
Completed in Jul 2019 - Jun 2021, Overall 79%
- **School of Management Sciences Varanasi**
Bachelor of Computer Applications- BCA
Completed in Jul 2016 - Jun 2019, Overall 71%

Skills & Abilities

- **Blockchain** : Blockchain Architecture, Smart Contract, Btc/Eth/Matic/BSC/Avax/ARBI, De-Fi, Web3, Rust, Solana, Hyperledger, Solidity, IPFS.
- **Front-End Development** : React JS, JavaScript,
- **Databases** :IPFS
- **APIs** : 3rd Party API Integration (IPFS uri, Crypto APIs etc)
- **Source Control Systems** : Git (github, gitlab)
- **Operating Systems** : Linux Windows 10,11, MacOS

Work Experience

Quy Technologies Pvt Ltd || Blockchain Developer *OCT 2021 - Mar 2024*

Key responsibilities:

- **Integrating Web3 components such as Web3Auth, WalletConnect, Metamask** into the company's WebApps mostly built using Angular or React.js/Next.js.
- **Integrate the communication between the WebApp and the Blockchain** to use NFT and Marketplace smart contract functionalities from the respective smart contracts, using EtherJS/Web3JS and ThirdwebSDK.
- **Developing, testing and deploying smart contracts** using Hardhat, Truffle and Solidity mostly on the Polygon, Ethereum, Binance, or other EVM based blockchains.
- **skills: Solidity . Web3Js . EtherJs, ReactJs JavaScript . Smart contract . Ethereum, Hardhat . Truffle . Typescript**

Parth Infosystems Pvt Ltd || Sr. Blockchain Developer *Mar 2024 - Jun 2024 (Contractual)*

Developed and deployed a smart contract for HASHS:

- **ERC20 custom token on both mainnet and testnet.**
- **Integrated reward points and DAO entry functionalities on the frontend.**
- **Managed third-party APIs for live crypto price data.**

A3 Services | Software Engineer Intern *Jul 2021 - Sep 2021*

Key responsibilities:

Assisting in Software Development

Troubleshooting and Bug Fixing

- **Exploring Python Libraries and Frameworks**

skills: Python Programming Language, Django, MySQL.

Projects

Metaprops NFT Marketplace | LINK: <https://metaprops.io/>

It is an NFT marketplace where sellers can sell their NFTs. There are 2 options for it:

1. NFT selling with Fixed Price
2. NFT selling with Weth Token (ERC20 Token) on Auction.

In NFT selling with Fixed price, we have used ERC-721 smart contracts with simple buy and sell functionality and in "NFT selling with WETH Token NFT" we have used ERC-721 and ERC20 Token smart contracts for weth payment. We have added Royalty and Marketplace commission as needed by the client. **I have worked on 2 areas in that project:**

- 1. Blockchain Development (Smart contract, Design, Developing and Deploying)**
- 2. Frontend Development (using React.js, Web3.js, Metamask Integration)**

Skills:

1. Polygon Chain
2. Solidity – ERC721, ERC20, Smart contract
3. React JS, Web3.js

Ludo NFT Game | LINK:

<https://play.google.com/store/apps/details?id=com.ludo.nft>

- The Game is played in 4 modes: play with friends, play with computers, play with 2 players, and play with 4 players.

- Winner of the Game received an amount in crypto ERC20 tokens also
- The Game is developed in Unity with the help of PHP and MySQL.

And Smart contract is written in Solidity for Deposit and withdraw fund over the Binance and Ethereum public Blockchain.

I have worked on 3 areas in that project.

Skills: 1. Binance 2. Ethereum, Binance

TheFineart Ledger | <https://www.thefineartledger.com/>

It is an NFT Marketplace. Where we can create a Digital copy of the Physical Art.

Users can create an Art and Mint to the Marketplace. And also users can sell the art on the Marketplace with Fixed and Timed Auction functionality.

We have added Royalty and Marketplace commission as needed by the client.

Also Platform is supported Multichain Blockchain i.e. Polygon, Ethereum and Flow.

Skills:

1. **Rarible.org sdk**
2. **Solidity Smart Contract**
3. **Polygon/Ethereum**
4. **React.js, Web3.js**

Artequitys | LINK: <https://artequitys.com/>

- Collaborated with project managers to select ambitious, but realistic coding milestones on pre-release software project development.
- Create a NFT marketplace with multiple user roles.
- User can buy NFT in Fractions. that means user can also purchase desired portion of the NFT
- Anyone can purchase whole NFT at once.
- Auction functionality also implemented with bid system
- **I have worked 2 to 3 areas in that project.**
- **Skills: Solidity, Ethereum, Polygon, Web3.js, React.js, Node.js**

Mokens-League | LINK : <https://www.mokensleague.com/>

Mokens League is a platform that supports a series of traditional sports video games that uses NFT's characters to play competitively.

Mokens League games are intended to work in a sustainable Win To Earn environment. Also NFTs can be traded, lent or sold in our marketplace. NFTs are randomly generated, unique and can be upgraded to perform better and have more value.

Skills:

1. **Polygon Chain**
2. **MOKA Token**
3. **React.js Web3.js**
