FINAL YEAR PROJECT

Open-Source CRM and Billing System.

Our final year project focused on developing an open-source CRM and billing system. This system helps businesses manage customer relationships and streamline billing processes. It allows businesses to store and update customer information easily, generate and send invoices, and track payments. By making it open-source, we promote collaboration and customization, providing businesses with a flexible and cost-effective solution.

PROJECTS

Attendance Management Database (DBMS Mini project)

The project is based on collecting the data of students, teacher and managing them.

Monty Hall Simulation

There are 3 doors in front of you, and there is a prize behind one of them.

Once you select a door, I will open one of the two you had not selected which does not have a prize behind it.

TRAFFIC SIGNAL SIMULATION

In this project, we have graphically implemented 'Traffic Signal Simulation', where it demonstrates working of traffic signals and transportation system.
