

Yedu Yesodharan

RPA Developer | 1.2 years experience in Robocorp & Certified in Automation Anywhere

Experienced Automation Engineer with a strong background in creating and implementing robotic process automation (RPA) solutions to enhance business operations and boost efficiency. Skilled in using RPA tools like Automation Anywhere, and Robocorp to automate repetitive tasks and improve workflows. Eager to apply my knowledge of RPA development to support a forward-thinking company focused on innovation and continuous improvement.

Work Experience

Automation Engineer|Quadance Technologies

October 2023- Present

- Proficient in developing and deploying RPA automations utilizing Robocorp and updated Python Robocorp to streamline business operations.
- Managed end-to-end automation development, including feasibility assessments, process design, coding, testing, and post-launch support, to meet client needs.
- Created and maintained clear documentation for RPA projects, including process flow diagrams, technical details, and test cases for better understanding and consistency.
- Worked closely with the development and QA teams to ensure the successful and timely completion of projects.
- Communicated with clients, providing updates on progress, issues, and solutions.
- Basic knowledge of Python programming, with an understanding of exception handling.

Professional Summary

Robocorp

- Automated data extraction and processing for large volumes of information.
- Created efficient automation workflows using Python and Robocorp.
- Interacted with applications and ensured smooth data processing through desktop automation.
- Implemented exception handling to manage timeouts and delays in automation tasks.
- Automated customer data validation and updates across various applications.
- Reduced manual effort by automating data management and processing tasks.
- Generated reports and organized files systematically into the correct directories.

Automation Anywhere

- Completed a certification in Automation Anywhere, developing RPA solutions and automating business processes using Bot Creator.
- Designed and implemented bots for various tasks, including online assistant bot creation, email automation, and PDF extraction.
- Developed an RPA challenge bot to solve real-world automation problems and optimize workflows.
- Worked with IQ Bot for data extraction from invoices, training the bot and deploying it for production environments.
- Gained hands-on experience with exception handling, ensuring robust and reliable bot performance in production.
- Currently working on a project automating stock data extraction from Finviz.com, enhancing market analysis using RPA technology.

Skills

RPA Tools	Robocorp, Automation Anywhere
Technical Skills	Basic Understanding in Python
Project Lifecycle	Experience in all stages: requirements gathering, solution design, development, testing, deployment, and maintenance.
Problem-Solving	Strong analytical and troubleshooting skills to resolve complex technical issues
Team Collaboration	Proven ability to collaborate effectively with cross-functional teams, including SMEs, business analysts, developers, and testers.
Soft Skills	Excellent communication and interpersonal skills. High attention to detail and commitment to delivering quality results. Ability to work independently and collaboratively within a team environment. Strong passion for continuous learning and staying updated with the latest technologies.

Project Experience

Project #1(UK Burial Register)

UK burial records, consisting of multiple volumes with a vast number of pages, typically include death-related information such as the deceased's name, date of birth and death, burial location, cause of death, occupation, and immigration details. These records are commonly used to find long-lost family members, build family trees, or trace the lineage of others.

Roles and Responsibilities:

Automated the process of extracting image URLs for 16,000 burial record images, enabling the download of high-resolution images from the website. Delivered an Excel document containing metadata for each image, along with the high-quality images organized in a specified directory. Addressed potential issues such as time delays and page expirations by implementing exception handling, ensuring seamless data extraction without interruptions.

Tools Used :

Robocorp and Python

Project #2 (Bristol Healthcare Services)

Insurance data validation and updating are critical in healthcare services companies. This process involves accurately transferring customer insurance data from confidential sources to client applications, effectively reducing manual workload and improving operational efficiency.

Roles and Responsibilities:

Developed a proof of concept for automating the import of customer data from CSV files into a client-side application with multiple interfaces. Implemented navigation checks across pages to ensure accurate data updates, and managed timeouts and delays during the update process to ensure seamless execution and reliability.

Tools Used:

Robocorp, Desktop Automation in Robocorp, Python

Project #3 & 4 - SBL-1143 and HWR (Handwritten Records) - Philippines

These two projects involved extracting data from various image batches in multiple languages and sharing the extracted content for further processing. Millions of documents were processed using different OCR engines to ensure accurate data extraction.

Roles and Responsibilities:

Assisted in designing and developing complete project solutions. Participated in on-call rotations to support deployments and resolve production issues. Collaborated with the development and QA teams to ensure the project's successful and high-quality delivery.

Tools Used:

Python, OCR Engines.

Certifications

- Robocorp Python - Level 1 & 2
- Automation Anywhere Certified RPA Professional (360)

Education/Qualifications

- B.tech , Mechanical Engineering from Marian Engineering College Kazhakootam
