Training Project

Hotel Application using Windows forms and ADO.Net in 3-tier Architecture

Description: Developed a hotel application with 3 main modules users, items, billing etc. In users module users can register and sign into application. In items module, the hotel management can add the items list with price and can modify, delete at any time based on requirement. In billing module, the customer ordered items would be added and then the bill would be generated automatically and stores the bill details in Ms-SQL server database.
