

Objective

Providing quality solutions to complex business issues within scope, budget, and tight schedules. Vast programming experience in diverse domains and flexibility to move from project to project for assimilating new technologies. I'm now eager to work for a forward-thinking company where I can collaborate with amazing people on amazing initiatives.

Key Skills

- Languages - C/C++/11/14, Win32, VC++/MFC
- Library - STL for common container data structures and algorithms
- Scripting - BASH/KSH, OSH (parallel processing), AWK, Perl & Python
- Middleware - InfoConnect Unimatic, Sunburst framework, Tuxedo, Pro*C/Oracle, SQL and XML
- Database - Oracle, Sybase, Windows SQL Server, SQL Server CE
- Enterprise - IBM InfoSphere DataStage
- Message Broker - RabbitMQ, Kafka
- Data Xchange format - binary, XML, JSON
- Tools - gcc/g++/gdb toolchain, Vim, gdb, VS Code, MS Excel, Notepad++, MobaX/Putty, SoapUI, and KCAT
- Version Control/Buuild Management - Git, bitbucket, Jira & Confluence, DevOps pipeline
- Memory Profiler - Valgrind
- IDE - VS Code, MS Visual Studio, Eclipse Indigo, Oracle Toad, DBVisualizer
- Operating System - Windows and Linux (HP-UX, IBM AIX, RHEL, Oracle Linux, CentOS, and Ubuntu)
- Scheduling tool - bmc control-m
- Software Methodologies - SDLC, Agile Methodology

Education

College of Engineering & Management, Kolaghat | B.E. Computer Science & Engineering

1998 - 2002

Grade: First Class

Professional Experience

E*TRADE from Morgan Stanley | Chicago, IL, USA | Bangalore, India | Mar-2021 to Sept-2024

Senior Analyst-I /Associate | Core Brokerage Application Developer, Margin, Buy & Sell (MBS)

- Design, develop, debug, test, and integrate services required for Mutual Fund (MF) order confirmation by the end-of-day settlement in the core brokerage platform.
- Design and develop an aggregator for massive payload handling for serial to parallel executions.
- Carry out the requirements analysis, and interact with the product owner and principal engineers to capture key functionality required for a new integration task.
- Document the functional steps and design layout on the confluence page for review and verification.
- Build the proof of concept (POC) when advanced technical principles, theories, and concepts are used to solve complex technical or business problems.
- Perform integration tests in all recommended environments for the newly developed services before the final integration with the core brokerage platform.
- Participate in code review and implement recommendations based on project guidelines.

- Deliver source code in the repository and monitor the DevOps build pipeline for unwanted errors & warnings.

Atos Syntel Inc | American Family Insurance (AMFAM) | De Pere, WI, USA | Aug-2020 to Mar-2021

Sr. Software Developer | Internet Rating Engine (IRE), Auto & Home Quote/Underwriting builder

- Implement or modify state-specific underwriting based on given requirements for auto/home products.
- Create new projects based on a certain effective date whenever the base premium calculation needs to be changed depending on various peril factors.
- Integrate new peril factor tables for base premium calculation methods.

SkyTECH/TCG Digital Solutions, Kolkata, WB, India | United Airlines (UAL), Chicago, IL, USA

1. Manager - Software Developer | Feb-2017 to Aug-2020, Chicago, USA
2. Sr. Software Developer | Oct-2015 to Feb-2017, Kolkata, India
3. Sr. Software Engineer | Jun-2012 to Oct-2015, Chicago, USA
4. Sr. Software Engineer | Dec-2010 to Jun-2012, Kolkata, India

- Implement end-to-end solutions for a given requirement, starting with developing a batch of custom parallel/serial operators using C/C++/awk for IBM DataStage and then developing KSH/BASH scripts to integrate new operators in a batch job.
- Schedule newly developed jobs in an automated run environment ensuring the safety of up/down data stream dependencies, to avoid unwanted exceptions in batch processing.
- Perform impact analysis for any urgent issues that arise from the post or pre-production system.
- Document solutions to be required to migrate an existing custom operator written using C/C++ in the IBM AIX system to the new RHEL or Oracle Linux environment.
- Participate in technical discussions with the principal architect, business users & team members affiliated with the project to gather and understand new technical requirements for the continued design and development of the solution for the RM systems.
- Provide expert domain knowledge in specific business and technical areas related to airline operations.

IBM Global Service, Kolkata, India | Philip Morris International (PMI), Bucharest, Romania | Maersk Sealand Logistic (MSL), Copenhagen, Denmark | Nov 2006 to Dec 2010

Sr. Software Developer

- Implement customized backend business process in the jdEdward framework to consume the sales activity that arises from multiple mobile POS by the end-of-day
- Initiate meeting requests with business users to clarify doubts related to new requirements.
- Prepare use cases, design documents, and estimation for the likely implementation timeline to complete the new tasks. Based on client approval, prepare the project plan and start execution.
- Implement dynamically configurable survey capability to gather smokers' feedback
- Implement fraud management for merchandiser module based on geolocation capturing
- Coordinate with the principal architect and peer team members while solving a large business case.
- Participate in code review and incorporate results as per project guidelines.

RS Software, Kolkata, India | Lexmark International and Lexington, KY, USA | Aug 2004 - Nov 2006

Associate Software Developer

- Develop different scriptable GUI services based on the proposed design and requirement. Execute discovery service module that looks for pluggable components to attach at runtime.
- Implement a command factory module that encapsulates reusable logic across modules.

- Participate in design review and code review sessions and incorporate the suggested changes to maintain coding and design principles during each iteration phase.
- Address any issue reported by the product test team during the development phase.
- Coordinate with the product test team while setting up the test platform or new hardware.
- Coordinate with the localization team to translate native text into foreign languages.
- Support maintenance activity for all existing products that face any challenges.

Vision Comptech, Kolkata, India | American Bureau of Shipping (ABS), Houston, TX | Oct 2003 - Aug 2004

Associate Software Developer

- Analyze and fix issues reported by the test team.
- Implement new functionality requested by the surveyor on demand.
- Incorporate a spell-checker across all rich-text editing areas of the application.
- Build a compartment area summary report for oil rigs.
- Automatic page alignment during printing of the gauge report.

VECC/BARC, Kolkata, India | Feb 2003 - Oct 2003

Internship/Trainee

- Study all existing proven image processing algorithms.
- Build the window-based image processing application with general-purpose features.
- Develop source code for any suggested new algorithm for the project.
- Perform comparative analysis based on one given input image
- Capture test results and document them for further analysis
