PROFESSIONAL SUMMARY

Innovative and results-driven Java Developer, Automation Test Engineer, and SDET with a proven track record of developing cutting-edge automation solutions. Proficient in Java, Python, and C#, adept at leveraging Selenium, Ranorex, and Spring Boot to streamline testing processes and enhance efficiency. Skilled in RESTful API development and integration, database management with MySQL, and Agile methodologies. Committed to delivering high-quality software solutions while driving continuous improvement and maximizing productivity.

SKILLS

Programming Languages: Java, Python, C
Automation Tools: Selenium, Ranorex
Database Management: MySQL
JIRA Workflow Management

RESTful APIs Development and Integration
Version Control Systems: SVN, Bitbucket
Agile Methodologies
Problem Solving and Troubleshooting

WORK EXPERIENCE

Associate - Developer

Oct 2021 - Present

Cognizant Technology Solutions

Generative AI Tool Development (Python and Selenium)

- Developed Generative AI tool leveraging Python and Selenium, facilitating the generation of test cases and automation scripts.
- Implemented a fully local and private solution, ensuring data security and privacy.
- Integrated the tool with JIRA for seamless workflow management and tracking.

Master Controller Project Development (Java, Spring Boot, MySQL, REST APIs)

- Led the development of a master controller project utilizing Java, Spring Boot, and MySQL.
- Designed REST APIs to serve as the backbone of the automation flow, supporting multiple frameworks.
- Streamlined automation processes across the organization, enhancing efficiency and reliability.

End-to-End Automation Tool Development (Java, Python, REST APIs)

- Engineered an end-to-end automation tool leveraging Java, Python, and REST APIs.
- Implemented functionalities to pull data from JIRA and generate comprehensive execution reports.
- Significantly reduced manual efforts by 90%, enhancing productivity and accuracy.

Firmware Version Tracking Software Development (Python)

- Developed a firmware version tracking software in Python to monitor gateway devices.
- Implemented mechanisms to detect firmware upgrades and notify relevant stakeholders promptly.
- Improved communication and coordination within the team, ensuring timely updates and maintenance.

Web UI Automation (Ranorex, C#)

- Automated multiple web UIs using Ranorex with C#, achieving zero escalations.
- Efficiently reduced manual efforts by 70-80%, enhancing testing speed and accuracy.
- Ensured robust and reliable UI testing across various platforms and environments.

Manual WiFi Testing for DOCSIS 3.1 Devices

- Conducted manual WiFi testing for DOCSIS 3.1 devices from vendors such as Commscope and Technicolor.
- Verified functionality and performance of WiFi devices, ensuring compliance with industry standards.
- Collaborated with cross-functional teams to address issues and optimize testing procedures.

EDUCATION

Bachelor of Engineering

Vemana Institute of Technology
Computer Science Engineering

CERTIFICATION

GEN AI Fundamentals
C Training
