Objectives :

As a data analyst, I specialize in transforming complex data into actionable insights. With a keen eye for detail and a passion for uncovering trends, I utilize statistical techniques and data visualization tools to support decision-making and drive business growth. My expertise spans across data cleaning, analysis, and interpretation, ensuring that data-driven strategies are both effective and efficient. Dedicated to continuous learning and improvement, I stay updated with the latest industry practices to deliver accurate and impactful analyses.

Skills

- Excel
- statistical Data Analysis
- Power BI
- Data Processing
- Tableau
- Data Cleaning
- DAX
- Data Visualization

Experience

DXC TECHNOLOGY

DEC 2022 -PRESENT

DATA ANALYST

- ❖ Engaging in the process of gathering, cleansing, and preparing diverse datasets from multiple sources, ensuring data integrity and readiness for comprehensive reporting and analysis.
- ❖ Executing complex data transformations utilizing Power Query Editor, enhancing the quality and usability of data for analytical purposes.
- ❖ Designing and developing visually compelling dashboards employing a variety of built-in Power BI visuals, including charts, graphs, and maps, to effectively convey data trends and insights to stakeholders.
- ❖ Orchestrating the implementation of advanced data transformations within Power BI, leveraging the full capabilities of the query editor to optimize data processing workflow.
- ❖ Generating interactive dashboards equipped with filters, bookmarks, and slicers, facilitating user-friendly navigation and data exploration for end-users.
- ❖ Managing the scheduling of automatic data refreshes and updates within the Power BI service, ensuring that reports reflect the most current data available.
- ❖ Crafting detailed analysis reports and visualizations utilizing DAX functions, including table functions, aggregation functions, and iteration functions, to derive meaningful insights from complex datasets.
- ❖ Collaborating on the development of data models and establishing relationships between various data tables, enhancing the analytical capabilities of reporting solutions.

Education

ST JOSEPH ENGINEERING COLLEGE MANGLORE

GRADUATION (BE)VTU – 2018 – 2022

Certification

- Microsoft certification: MS 900 Microsoft 365 fundamentals (ID:0000161280)
- IBM Skills Build Data Analytics
- Power BI for Beginners (ID:0000238768)

Projects

Mental Health Data Analysis Project

POWER BI

- Analyzed a large dataset (413,768 records) using Python to uncover significant trends in mental health, including correlations with income, physical activity, and chronic conditions.
- Identified that individuals earning below \$41,999 had a 35.93% likelihood of mental illness, with sedentary individuals showing the highest prevalence of mental illness at 30.81%.
- Demonstrated that widowed individuals had the highest rate of mental illness (31.39%), with Associate Degree holders showing the highest rates by education level (33.34%).
- Developed an interactive Power BI dashboard for real-time exploration of mental health insights, facilitating data-driven decision-making.
- Highlighted the financial disparity, showing individuals with mental illness earn an average of \$42,254, significantly lower than those without a history of mental illness (\$54,335).

Data Analysis on Pizza sales

SQL

- Analyzed pizza sales data using SQL to identify key trends and patterns, improving business decision-making.
- Developed complex queries to extract insights on customer preferences, sales growth, and regional performance.
- Optimized database performance by creating efficient joins, subqueries, and aggregate functions.

Sales Dashboard

Excel

- Developed and maintained an Excel-based sales management dashboard using Pivot Tables to track key sales KPIs such as revenue, profit margins, and customer segmentation.
- Conducted in-depth analysis on sales trends, product performance, and regional sales data, providing actionable insights to management.
- Improved sales forecasting accuracy by implementing dynamic charts and slicers for real-time data exploration.
