Skills

Languages: Python

Technologies & Tools: Langchain, Llama Index, Chroma Db, Pinecone, Faiss, Weaviate, Machine Learning-ML, NLP, Open-source and paid LLM models (Llama2, Mistral, OpenAI, Google Gemini Pro), Hugging Face, Hugging Face spaces, aws bedrock, Streamlit, Streamlit community cloud, NLP, Git, Github, Github Actions, Docker, DVC, Mlops, LLMops, RAG, Groq

Work Experience

Goperceptive, Haryana

Feb 2022 - Present

Python Developer(2 year)

- -Python scrapy based data crawler
 - Extracting information about products from popular Ecommerce websites like Amazon, BigBasket, Flipkart, Blinkit, Nykaa, Swiggy, Zepto, Myntra, Netmeds, Shajgoj, Daraz etc.
 - Information about products like title, description, sale price and offer price, instock or out of stock or delisted, ratings etc
- Tech stacks: Python, Scrapy, Selenium, Git

Novelworx Digital solutions pvt Ltd ,kochi

Internship @ Resume Parsing

- A simple resume parser used for extracting information from resumes Convert unstructured resumes into structured format
- The process of resume parsing saves recruiters hours of daily work To sum up, a resume parser can organize and analyze the resume data much faster than humans, bringing automation in your recruitment process
- Tech stacks: Python, Pdfminer, Spacy, Regex

Education

Cochin university of science and technology(CUSAT)

Msc computer science with Data science

Relevant Coursework: Machine Learning, Deep Learning, NLP, Python, Big Data

Gen AI Projects

End to End Retrieval Augmented Generation(RAG) Application

- Overview: Built a RAG-based application that combines large language models with a retrieval mechanism to provide precise and contextually relevant answers from domain-specific documents. The system indexes documents, retrieves relevant content using similarity search, and generates concise responses using AI.
- Technologies: LangChain, OpenAI API, Pinecone/FAISS, Streamlit

SQL Chatbot for odoo postgre Database

- Overview: This project enables users to interact with an Odoo PostgreSQL database through natural language. It converts user questions into SQL queries and retrieves relevant data using an AI chatbot.
- Technologies: Langchain, Groq, Streamlit, Agents

Job Recommendation System for job title prediction

- Overview: This system allows users to input a job description and receive a predicted job title. The model leverages **Bert based** architecture (specifically bert-base-uncased) for understanding and processing job descriptions, with fine-tuning on a custom dataset obtained from Kaggle.
- Technologies: Hugging Face, Fine tuning, streamlit, bert-base-uncased model, hugging face hub

Courses and Certificates

- Complete Data science,machine learning,DL,NLP Bootcamp by krishnaik-udemy
- Complete Generative AI course with Langchain by krish naik -udemy
- Mastering Generative AI with Open AI,Langchain and llamaindex by ineuron
- Workshop on Data science with Machine Learning at Eduzell
- Federal academy for cyber education : attended the seminar on cyber security and forensics
- Introduction to NLP :attended seminar on NLP(natural language processing) at bridge global,kochi
