Professional Objective

To obtain a responsible and challenging position in design and development of robust software systems, in a team-oriented development environment and to contribute my bit to the exciting world of Information Technology, an industry that is changing the way the world works and lives.

Professional Summary

- **Over 2 years of experience** in developing web and desktop applications, specializing in ASP.NET Core and Angular.
- Extensive experience with **ASP.NET (MVC), .NET Core Web Api, and Angular.**
- Proficient in a wide range of technologies including C#, ASP.NET, SignalR , JavaScript, TypeScript, jQuery, Bootstrap, HTML,CSS, Firebase, Azure CI/CD, Open AI Apis, Google Cloud , ffmpeg and Web RTC.
- Skilled in working with databases such as MySQL ,SQL Server (2019, 2022) ,PostgreSQL and MongoDB.
- Excellent interpersonal skills, with the capability to work effectively both independently and collaboratively as part of a team.

Technical Competency

- **Primary Skills:** .Net Framework (ASP.NET(MVC), ASP.NET Web API , Angular
- **Secondary Skills:** MySQL ,SQL Server (2019, 2022) ,PostgreSQL and MongoDB, SignalR , JavaScript, TypeScript, jQuery, Bootstrap, HTML,CSS, Firebase, Azure CI/CD and NUnit
- **Tools:** Visual studio 2022 ,Team foundation server ,Microsoft Azure DevOps
- **OS:** Microsoft Windows Family, Open sources (Linux, Ubuntu)

Experience Summary

Current Company: LoyolaSoft Technology Private Limited

November/2022- till date

- Playing the role of a dedicated Developer for Chat App , Bot Survey and CMS & SMS (College Management System & School Management System).

Academic Details

- **M.sc** – from Periyar University with **84%**
 - **B.sc**- from Periyar University with **74%**
 - **HSC** - from Govt.Hr.School, Pennagarm,Dharmapuri Dt with **60%**.
 - **SSLC** - from Govt.Hr.School,Pennagarm , Dharmapuri Dt with **77%**.
-

Project Profile

1. Chat Application – Web Application

Project Title	:	Chat Application
Duration	:	12/2022 to 06/2023
Technology	:	ASP.NET core Web Api(Rest API) , Angular, Typescript, Javascript, c#, Signal R
Role	:	Developer

Description:

This chat application is designed to provide seamless communication among users, featuring both individual and group chat capabilities.

- **Individual Chat:** Users can engage in private one-on-one conversations with other users. The chat interface is designed to be intuitive, ensuring easy access to messages, media sharing, and conversation history.
- **Group Chat:** Multiple users can participate in group chats, making it ideal for collaborative discussions, social interactions, or team communications. Users can create groups, invite members, and manage group settings like notifications and permissions.
- **Notifications:** Real-time notifications keep users informed about new messages, mentions, and other important updates. Notifications can be customized per user preference to avoid interruptions during busy times.
- **User Status:** Users can set their status (e.g., online, offline, busy, away) to inform others of their availability. The status is displayed alongside the user's profile and is automatically updated based on activity.

The chat application is designed to be user-friendly and efficient, ensuring that communication is smooth and effective across all user levels. It supports media sharing, search functionality, and has robust security features to protect user privacy.

2. Bot Survey–Web Application

Project Title	:	Bot Survey
Duration	:	07/2023 to 08/2024
Technology	:	ASP.NET Core Web API , Angular, C#, TypeScript, Angular Material, JavaScript, MongoDB
Role	:	Developer

Description

This bot survey application is designed to streamline and automate the interview process through advanced communication and AI technologies. The system integrates multiple features to enhance the user experience and improve the efficiency of conducting surveys and interviews.

Key functionalities include:

- **Interview Call Scheduling:** The application allows for the automated scheduling of interview calls, ensuring that both the user and the interviewer receive notifications via email and WhatsApp. The bot manages the scheduling process, coordinating times, and sending reminders.
- **Communication via Email and WhatsApp:** The bot is capable of sending emails and WhatsApp messages to users, providing updates, instructions, and reminders related to the interview process. This ensures that users are informed and engaged throughout the process.
- **Screen Capturing:** During the interview, the bot captures the screen activity of the user. This feature is useful for monitoring the user's interaction with the survey or interview questions, ensuring that the process is smooth and transparent.
- **User Audio, Bot Audio, and Video Integration:** The bot engages in real-time communication with the user through audio and video. The user's responses and the bot's questions are recorded, with audio being converted to text using OpenAI's Whisper API, allowing for seamless text-to-speech and speech-to-text interactions.
- **Real-Time Processing and Server Updates:** The bot processes the audio and video data every 15 seconds, pushing the data to the server for real-time updates. This ensures that the communication is up-to-date and that the data is captured accurately.
- **Concatenation of Audio and Video:** The application concatenates the user and bot audio and video interactions into a single cohesive file. This file includes the entire conversation, providing a complete record of the interview or survey session.
- **GCP Storage:** The final audio and video files, along with the extracted text and data, are securely stored in Google Cloud Platform (GCP). This ensures that the data is accessible for future reference, analysis, or compliance purposes.

This bot survey application leverages OpenAI APIs for natural language processing, enabling efficient and intelligent communication between the bot and the user. The system is designed to be robust, scalable, and secure, providing a comprehensive solution for conducting automated interviews and surveys.

3. School Management System(SMS)

Project Title	:	SMS
Duration	:	08/2024 to till
Technology	:	C#,ASP.NET(MVC),Ajax, MYSQL, JQuery, Bootstrap, Firebase
Role	:	Developer

Description

This School Management System (SMS) is designed to facilitate efficient communication and management within a school environment. One of the key features of this system is its integration with Firebase for push notifications, enabling targeted and real-time updates.

The system supports various notification types, including

- **Student-Wise Notifications:** Personalized notifications are sent to individual students, providing them with important information such as homework assignments, exam schedules, and school events. This ensures that students stay informed and up-to-date on their responsibilities.
- **Staff-Wise Notifications:** Teachers and staff members receive notifications tailored to their roles, such as meeting reminders, class schedules, and administrative updates. This feature helps streamline communication and ensures that staff are always aware of their duties and upcoming tasks.
- **Class-Wise Notifications:** Notifications can be sent to specific classes, keeping all students in a particular grade or section informed about class activities, assignments, and announcements. This feature simplifies the process of distributing information to a large group of students.
- **Homework Notifications:** The system allows teachers to send homework assignments directly to students via push notifications. This ensures that students receive their homework on time, and parents can also stay informed about their child's assignments.

Personal Info

Name	Kesavan V
Father Name	Venkatesan P
PAN Number	HIOPK6844M
Passport Number	Applied
DOB	13/04/1999
Gender	Male
Languages Known	English & Tamil
Marital Status	Married

I here by declare that, all the information furnished above is true to the best of my knowledge and belief

Place : Dharmapuri
