

Manasa Satya J

DevOps Engineer

+91- 9032839121

manasasatya0532@gmail.com

Professional Summary

- Having **4.1 years** of experience as a **Linux** and **AWS Cloud & DevOps engineer** in software configuration and release management including source code, build and deployment management, and a complete understanding of software development life cycle using agile methodologies.
- Hands on experience with version control tool **GIT**.
- Hands on experience with SCM tools like **Git** for branching, tagging and version management.
- Extensive experience in setting up maintaining CI&CD tools like **Jenkins**.
- Experience in Configuring and Managing build tool like **Maven**.
- Expertise in trouble shooting the problems generated while building, and deploying.
- Experience in installing, configuring with **Jenkins**.
- Configured **Jenkins** jobs, install plugins for generating project artifacts.
- Worked on web servers like **Apache, Nginx** and application server like **Tomcat** to deploy packages.
- Using **Ansible** as Configuration Management Tool and deploying WAR/JAR through Ansible to Servers.
- Having experience in **Linux** environment and infrastructure.
- Good knowledge on **Bash scripting**.
- Hands on experience in delivering container-based deployments using **Docker**.
- Having experience in creating custom Docker Images using **Docker file**.
- Experience in AWS cloud services such as **EC2, IAM, VPC, S3, CloudWatch, CloudTrail, Route53, AutoScaling, Elastic load balancer, elastic container registry, elastic container service** and **SNS**.
- Utilized **CloudWatch** to monitor resources such as **EC2, CPU memory**, and **EBS** volumes set alarms for notifications or automated auctions and monitor logs for a better understanding and operations of the system.
- Having experience on code quality plug-in **SonarQube**.
- Good experience on **Nexus** Repository Manager.
- Worked on **Terraform** scripts, Worked with Terraform to create AWS components like **EC2, IAM, VPC, ELB, Security Groups**.
- Created common **Terraform** modules for use across multiple AWS environments.
- Have good knowledge on Deploy, Manage, and Scale Docker Containers on servers in various environments using **Kubernetes**
- Experience in managing **Kubernetes** Cluster on AWS using pods, services and Replication Controller services.
- Excellent communication, team membership and relationship management skills.

Education Qualification:

- **B.Tech**, at **Nalanda Institute of Engineering and Technology**, Guntur in **2019**.

Professional Experience

- Working as an **AWS Cloud & DevOps Engineer** at **Techies Infotech Pvt Ltd** from **DEC 2019** to **Till Date**.

Technical Skills:

Operating Systems	Linux, Ubuntu, Windows
Version Control Tools	Git, GitHub
Build Managements Tools	Maven
Scripting Languages	Bash Scripting
Application Server	Apache Tomcat, Nginx
CI & CD Tool	Jenkins, Argo CD
Configuration Management Tool	Ansible
Infrastructure automation Tool (IAC)	Terraform
Containerization Tools	Docker
Container Orchestration Tool	Kubernetes
Cloud Technology	AWS
Monitoring Tool	Cloud Watch, Prometheus, Grafana
Code Quality	SonarQube
Ticketing Tool	Jira
Artifactory	Nexus

Project Details

Project#2 : **LifeStance Health**
Role : **AWS & DevOps Engineer**
Duration : **NOV-2021 To Till Now**

Description:

LifeStance Health is a mental health care service platform operating from number of curated cities of USA, helping patients to find best care for their mental health. Using Lifestance a patient can find best clinician around him and book appointment at their convenient availability. The application interacts with external data sources like AMD and MDstaff to get the real time data to offer the patient best real-time services.

Roles and Responsibilities:

- Creating **CI/CD** pipelines by integrating **Git, GitHub, Maven, Jenkins, SonarQube, NexusAnsible, and AWS** (provisioning).
- Configuring of **VPC** with networking of subnets containing servers.

- Defined **AWS** Security Groups which acted as virtual firewalls that controlled the traffic to reach one or more **AWS** EC2 instances.
- Used **GIT** for source code version control and integrated with **Jenkins**
- For **CI/CD pipeline**, code quality tracking and user management with build tools **Maven**.
- Upgrading **Jenkins** and build triggers for jobs whenever the new commit occurs through webhooks.
- Collaborated with Development and Support teams to setup a **CD** (Continuous Delivery).
- Worked on Multiple **AWS** instances, set the security groups, Elastic Load Balancer.
- **AMIs, Auto scaling** to design cost effective, fault tolerant and highly available systems.
- Creating snapshots and managing **EBS volumes**.
- Experience in AWS cloud services such as **EC2, IAM, VPC, S3, CloudWatch, CloudTrail, Route53, Auto Scaling, Elastic load balancer, elastic container registry, elastic container service and SNS**.
- Install, Configure **Jenkins** Continuous Integration Tool
- Setup **Ansible** Playbooks to perform builds and deployment management.
- **Scripting** & automating tasks using **bash scripting** for backup.
- Worked on **Terraform** scripts, Worked with Terraform to create **AWS** components like **EC2, IAM, VPC, ELB, Security Groups**.
- Created common **Terraform** modules for use across multiple **AWS** environments.
- Building/Maintaining **Docker** container clusters managed by **Kubernetes** on **AWS**.

Environment: AWS, Linux, Git, GitHub, Maven, Jenkins, SonarQube, Nexus, Shell Scripting, Tomcat, Docker, Jira, Terraform, Kubernetes.

Project#1 : **ECOMMERCE**
Role : **AWS & DevOps Engineer**
Duration : **DEC-2019 To OCT-2021**

Description:

Project is about maintaining the ecommerce website of Sears 24/7 as major part of Sears businesses based on Ecommerce sites should be available all the time. Our team job is to build and release code of deployment on servers to Deployment teams. Site will be developed in stages - DEV, Testing, Performance, UAT, Production, DR stages.

Roles & Responsibilities:

- Setting up the new build environment for various applications in **Windows/Linux** environment.
- Managed to organizational standards by maintaining the source code in **Git** for various applications.
- Creating and maintaining the development and stage branches on **Git**.
- Using **Maven** as a build tool, I could automate the process of building artifacts.
- Implementing **Jenkins** continuous integration tool including installing setting the jobs/plans and setting up the tool for deployment.
- Involved in installing **Jenkins** on a Linux Machine and creating a **Master** and **Slave**
- Configuration on implement multiple parallel builds through a build.
- Automating the manual process if any, by writing the **Shell Scripts**.
- Involved in **deployment** of the application using **Tomcat**.
- Worked on **Terraform** scripts, Worked with Terraform to create AWS components like **EC2, IAM, VPC, ELB, Security Groups**.
- Primary responsibilities include Build and Deployment of the java applications onto different Environments like **QA, UAT** and **Production**.

Environment: Linux, Git, Maven, Jenkins, Nexus, Nginx, Bash Scripting, Tomcat, Docker, Terraform.

DECLARATION:

I, hereby declare that all the details furnished above are true to the best of my knowledge.
