EXPERIENCE

Adiquity Technologies Pvt LTD.	Bangalore, India
Project 1): Data Warehousing/ Migration in Redshift.	
Designation: Data Engineer	April 2021– Till Now
<u>Roles & Responsibilities:</u>	

- **Developed and optimized high-performance big data pipelines** utilizing Apache Spark, Python and AWS services (S3, DMS, Glue, lambda) to achieve seamless data integration and transformation of large datasets.
- **Demonstrated expertise in AWS data management services** like S3, IAM roles, and DMS, ensuring secure and efficient data movement within the cloud environment.
- **Created and executed data processing scripts and SQL queries** to support complex data extraction, transformation, and analysis requirements.
- **Designed and implemented batch processing solutions** for structured data, optimizing data processing workflows for efficiency and scalability.
- **Optimized data processing workflows** by employing PySpark libraries and techniques along with Python scripts to achieve high performance and scalability.
- **Established a robust monitoring framework** for ETL jobs, proactively identifying and resolving potential issues to ensure smooth data pipeline execution.
- **Automated seamless data transfer** from the Amazon S3 output directory to Amazon Redshift for further data warehousing and analysis.

Project :2) Insurance Data Warehouse

Designation: Junior Data Engineer

Roles & Responsibilities:

- **Managed task tracking** and progress monitoring on the sprint board.
- **Developed PySpark programs to extract data** from Oracle DB to CSV format.
- **Created and optimized PySpark programs** for data transformations.
- **Deployed jobs** into SIT (System Integration Testing) and UAT (User Acceptance Testing) environments.
- **Performance Conducted QA** support activities, including test data creation and unit testing.
- **Collaborated with Business Analysts (BAs)** to thoroughly understand and clarify requirement
- **Implemented Spark SQL code** as an alternative approach to enhance data processing speed
