

VASANTHA KRISHNA GAMPALA

Email : gampalavasanthakrishna@gmail.com

Mobile : +91 9381457295

Career objectives :

Seeking for a challenging and responsible opportunity as a beginner role to enhance and explore my technical knowledge gained in University along with eight months of advanced Embedded course.

Education :

- B.tech (ECE) , St.Marry's Women's Engineering college , Guntur , 7.09 (CGPA) , 2019 – 2023.
- Inter (Class – X11) , Narayana Junior College , Tenali with 8.46 CGPA , 2017 – 2019.
- Class – X , St. Joseph English medium High school Emani , Guntur (DT) with 8.5 CGPA , 2016 – 2017.

Technical skills :

Programing Languages:

- Advanced C programming.
- OOP using C++
- Data structures and algorithms
- Shell scripting (Linux)
- Linux Internals

Embedded platforms :

- PIC (18F4580) board

Communication Protocols :

- UART , SPI , CAN , I2C

Development environment and tools :

- Vim , Make files , MPLAB IDE.

Compilers :

- gcc , Xc8

Projects :

Title : Image Steganography using LSB Encoding and Decoding

- The objective was to send the secret text file encoded inside an image of bmp file format. Encoded the length of that secret file and then encode the data into the LSB of the image bytes . The decoding process involves to decode the data from the encoding process bit by bit . The final o/p is the secret data that after the decoding process.

Technologies used : Advanced C – Structures , Enums , File I/O operations , File pointers , Bitwise operations , Command line arguments.

Title : Inverted Indexing using Hash Algorithms

- The purpose of storing an index is to optimize speed and performance in finding relevant documents for a search query . Without an index ,the search engine would scan every document in the corpus ,which would require considerable time and computing power.

Technologies used : Advanced C and Data structures – String manipulation , File operations , pointers , Command line arguments , single linked list , Hashing.

Title : Car Black Box

- Car black box is of monitoring and recording the events of vehicles like speed , gear time . It is used to log critical events this will help in proactive vehicle monitoring and maintenance . In this project we can view the details and download the data and clear data stored in recorder

Technologies Used : PIC18F4580 board , UART, I2C , External EEPROM

Title : Smart crop protection using IOT

- The main agenda of this project is to protect the crops and helps the framers to grow the crops in easy and efficient way .This motivates us to do an extensive research for conserving the water in agriculture . The advancements in wireless sensor network help to sense several factors like soil moisture , temperature and humidity etc

Technologies used : Arduino board , Blink IOT , moisture sensor , humidity sensor , fire sensor , motor , ESP32 cam

Strengths :

- Willing to learn new skills that starts from basics
- Ability to take responsibilities
- Good communication skills

Declaration :

I here by declare that all the above mentioned information is true to the best of my knowledge and belief.

Yours sincerely,

Vasanth Krishna . G
