

Personal Details

Email: **agarwalprakhar08@gmail.com**

Mobile no: **9773033955**

Country: India

Expertise:-

- Machine Learning Modelling, Logistic Regression, Cat-boost, XGBoost, LightGBM, Random Forest, SVM
 - Design and develop the LLM Models (Open source, OPEN AI, Hybrid) and deploying using LLMPOPS in production.
 - Created **AI Labs** and design patterns for all functions in organization to use custom /LLM models seamlessly
 - **Deep Learning NLP -TensorFlow, PyTorch, CNN, LSTM, Transformers**
 - Worked on Various pre-trained model like **ELMO, BERT, RoBert**
 - Text Analytic (NLP)-Word2Vec, Word Embedding, **Classifications, Entity Extraction, Entity Matching, Entity Resolution**
 - **ML OPS-** Implemented and deployed Models using **MLOPS** in standalone/distributed env) in all three clouds **Azure, AWS and in GCP**
 - Design and Implemented **MLOPS** using mlflow in Databricks
 - Cloud ML Framework- **AWS SageMaker, Azure ML and GCP Vertex AI**
 - Created **AI/ML micro services** and deployed in **Kubernetes**,
 - **PySpark, Hive, Impala Sqoop, MongoDB, Kafka, AIRFLOW, GCP BIGQUERY, AWS LAMBDA, AWS GLUE, EMR, GCP DataProc,**
-

Domain

- Sales Ops
 - Banking and Insurance
 - AML- Customer Screening
 - AML - Customer Filtering
 - AML - Transaction Monitoring
 - Banking-Credit Risk Modelling
-

Key Skills

- Prakhar has 18+ years of diverse analytical engineering experience in Credit Risk, Life Insurance, AML customer Screening, AML Transaction Filtering, Transaction Monitoring, risk, and sales operations domain
- He has an experience in implementing and deploying a Deep Learning and Machine Learning solution in Azure and AWS
- Prakhar has worked on text mining using traditional as well as Deep learning NLP technique. He has an experience in implementing the free-text Chatbot, Entity recognition, Entity Matching and Text Classification using deep NLP solutions
- He has also implemented Batch and real time application in Big-Data technologies like PySpark, KAFKA, Mongo DB, Hive, HDFS, Sqoop, SageMaker, LAMBDA, GLUE
- Prakhar worked as a Data-science and BIG DATA solution architecture for various clients
- He has also implemented a various solution in AWS
- Real-time model prediction using Kafka, PySpark, nosql, deep learning solution for AML Payment Screening
- Design the Technical solution, Select the Technology Stack, Develop the AI/ML model Deploy the Model in production in Docker env in Cloud as well as on Premises
- Near Real/batch Model Prediction for AML Transaction Monitoring using Impala, Python, Hive, Oozie,
- Developed AML Customer recommendation engine in batch mode.
- Extract data from Enterprise data warehouse to Data Lake using pyspark, Airflow, hive, Athena
- Create Feature Bank for Modelling
- Transform and prepare the data which requires for Model
- Train, deploy and monitor the model
- Part of product team to develop automated machine learning solution

Technology

- Python (Pandas, TensorFlow, PyTorch, Langchain)
- Hadoop Technologies Pyspark, Hive, Airflow, Sqoop, Kafka, Kafka Stream, Kafka SQL, Debezium CDC, oozie, IMPALA
- Tools: - TeamCity, Jenkins, Dockers, Git
- NoSQL (MongoDB, Cassandra, Postgres Nosql)
- RDBMS (SQL, Oracle)
- Operating System (Window, Unix, Linux-RHEL, UBUNTU)
- AWS Cloud: AWS glue, s3, Lambda, redshift, Sagemaker, EMR, Athena
- Azure Cloud: AzureML, Databricks, event hubs

Achievements

Award Name	Award Date	Award Category	Achievements
Q4'2023 Award	13-Dec-2023	Adobe Q4 Award	Developed customer health scorecard from scratch
Technical Excellence Award	02-Feb-2021	Awards for Excellence	Individual award for implementing AML Transaction Monitoring
BPS Star Performer Award	27-May-2019	BPS Awards	Best Award for creating product.
BPS Star Performer Award	24-Apr-2019	BPS Awards	Best Data Scientist Award by RBS and TCS in 2019 for creating a E2E recommendation model for AML Screening

Adobe (Feb'2023-Till)

Project Name	Adobe-Customer Intelligence Team
Responsibility	- Design data model and create a pattern to ingest data from different sources. - Extract data from various source to Enterprise data warehouse to analyze the C360 view of Customer. Create Data models and analyze the customers important parameters
Technical Skills	Data Bricks, Redshift, Python, Pyspark,
Achievements	Receive Individual Award

LTIMINDTREE (Sep'2022 -Feb'2023)

Project Name	Munich Re Reinsurance Risk
Responsibility	- Refactor and redesign the statistical modelling code - Migrate the on-premises code to Databricks and created a workflow to retrain the model as per schedule - Implement the MLOPS using MLFLOW and created a feature stores. - Implement the continuous integration and deployment of models in Azure devops - Validate the Model with Unseen data - Fine Tune the model
Technical Skills	Databricks, Python, Pyspark, Azure Devops

TCS (Aug'2018 -Sep'2022)

Project Name	NATWEST Bank AML- Transaction Filtering
Responsibility	- Understand the Data and Domain from Business for Unstructured data using Deep Learning - Developed the NLP code in Pytorch to extract the various entities did entity matching algorithm - Text mining techniques to be used to get the insight of data - Develop the Deep Learning model - Validate the Model with Unseen data - Fine Tune the model
Technical Skills	Deep Learning, Pytorch, NLP, Transformer, LSTM

Project Name	NATWEST AML- Transaction Monitoring
Responsibility	Extract data from Enterprise data warehouse to Data Lake. Create Feature Bank for Modelling Transform and prepare the data which requires for Model Train deploy and monitor the model Push the model recommendation to source system
Technical Skills	Data Engineering- Pyspark, hive, Impala, Oozie Data Science- Python, MLLIB,MLOPS,Pyspark
Achievements	Receive Individual Award Receive Team Award as well

Project Name	RABO BANK Credit Risk
Responsibility	Developed the End-to-end solution for IFRS9 and Basel for Credit risk Developed brick solution which is easily customizable and maintainable
Technical Skills	Python, Celary, Docker, Azure

Project Name	RBS BANK AML Customer Screening
Responsibility	Part of customer screening Project in Anti money laundering (AML) wherein machine learning algorithms are written to identify the Political exposed person (PEP) and identify the designation s from sanction list using advanced NLP
Technical Skills	Python, Machine Learning, Deep Learning
Achievements	Best Data Scientist Award

LTI (July'2012 -Aug'2018)

Organization Name	LTI
Role Description	Embracing a role of Data scientist and solution architect for SBIL client wherein LTI is cater services to manage their Policy management product, Production support, Development of new enhancement. We have been involved in migration of legacy insurance product to new Ingenium product. Developed a model using predictive algorithm &neural network algorithm get the best fit model for Claims fraud, policy campaign, detect lapsation Responsible for end-to-end delivery for multiple accounts. Python MATLAB using the historical data as input and depending on the neural network algorithm, we train the models and then the output of the MATLAB is used as an input for Forecasting, (load forecasting and price forecasting).
Technical Skills	Python, SQL, PLSQL, Unix

AEGON (April'2009 ~June'2012)

Organization Name	Aegon Religare Life Insurance Company limited
Role Description	Embracing a role of Technical manager IN AEGON Life wherein handle policy management system in SQL and PI SQL. Analysis were being done using PL SQL.
Technical Skills	SQL,PLSQL,UNIX,GraphTalk(C++)

Satyam (Dec'2006 -April'2009)

Organization Name	Mahendra Satyam (Satyam Computer Services Ltd.)
Role Description	Designing and software development. Providing solution to make business profitable. Handling change requests for the module. Expertise in SQL, PLSQL, GraphTalk (C++) developers' language. Integration Testing of the Module at Onsite. Organizing and supporting Business Testing; facilitating user acceptance testing
Technical Skills	SQL, PLSQL,GraphTalk(C++)

Certifications

Azure 900	06-Jan-2021
Azure DP100	13-Feb-2021
