

RESUME

KISHORE

Mobile: +91 9182819334

E-mail: Kishorejadi956@gmail.com

Profile Summary

Having 4.7 years of IT Experience as Oracle PL/SQL Developer & SQL Developer & PostgreSQL, SSIS, SSRS, Azure Data factory, DBA, Data analyst, MySQL, MS SQL, T-SQL, Shell scripting, Oracle ASM, ETL Developer Oracle application Express, Oracle Golden Gate, Oracle SCM, Oracle schedule, File API, JSON for System Analysis, Designing, Development and Support of Oracle 10g & 11g and 12C Fusion Middleware ERP Application in Production, Staging and Development environments.

creating efficient PL/SQL packages, procedures, triggers, and functions to support business applications. Proficient in performance tuning, data migration, and ensuring database reliability and security. Excellent problem-solving and communication skills with a focus on delivering scalable solutions.

Professional Experience:

- Working as Software Engineer in Vitech Systems, Hyderabad (May 2020 to till date)

Professional Summary:

- Good knowledge on performance tuning of the SQL queries and programs.
- Have a good experience on Imports , Exports and Documents.
- Have a good experience in Types, Collections and Bulk Collect & Bulkbind prospective.
- Proficient in writing SQL queries, Cursors, Sub programs like Procedures, Functions and Triggers in PL/SQL blocks.
- Well acquainted in SQL sub queries, applying constraints, creating views and indexes.
- Good in RDBMS concepts.
- Good understand skills of where must create Indexes, Sequences.
- In-depth knowledge in writing medium and complex queries using joins, subqueries and grouping.
- Aware of PL/SQL concepts like cursor, exception handling.
- Experience on creating Triggers and Pragma Autonomous Transactions.
-
- Good knowledge in PL/SQL objects with constructors and also nested tables.
- Good work experience with regular expressions.
- Ability to write complex SQL Queries and code reviewing.
- Knowledge on performance tuning of the queries and PL/SQL Sub programs.
- Appetite to learn new technologies and can work under pressure environment.
- Excellent communication, interpersonal, research/analysis and organizational skills.
- Designing the structure of databases based on business requirements.
- Setting up database schemas, tables, indexes, and relationships.
- Ensuring scalability, efficiency, and consistency in the database design.

- Configuring databases for optimal performance and security.
 - Implementing clustering, replication, or other advanced features if required.
 - Monitoring database performance using tools and metrics.
 - Identifying and resolving bottlenecks.
 - Optimizing queries, indexing, and overall system configuration.
 - Implementing regular backup schedules and policies.
 - Performing database restoration in case of failure or data corruption.
 - Testing backup and recovery procedures periodically.
 - Implementing access controls and authentication mechanisms.
 - Encrypting sensitive data and ensuring compliance with data protection regulations.
 - Monitoring for unauthorized access and vulnerabilities.
 - Ensuring data consistency, accuracy, and completeness.
 - Managing database constraints and rules to prevent invalid entries.
-
- Ensuring the database system can handle increasing workloads without degradation.
 - Addressing database errors and failures promptly.
 - Working with developers to debug and resolve SQL-related issues.
 - Planning and executing database migrations to newer versions or different platforms.
 - Ensuring minimal downtime during migrations and upgrades.
 - Validate the JSON structure using tools like [JSONLint](#)
 - JSON is frequently used to transfer data between a client and a server in web applications.
 - JSON is often used for configuration files due to its simplicity and readability.
 - JSON is used for lightweight data storage in files or databases.
 - JSON is used for transmitting structured data between IoT devices and platforms.
 - JSON is used in data pipelines and workflows for processing and exchanging structured data.
 - Check job status: Use views like `DBA_SCHEDULER_JOBS` and `DBA_SCHEDULER_JOB_RUN_DETAILS` to ensure all jobs ran successfully

- Review failures: **Investigate failed jobs by examining the logs and error codes.**
- Error analysis: **Review the error details using DBA_SCHEDULER_JOB_RUN_DETAILS and logs in the DBA_SCHEDULER_JOB_LOG.**
- Update job definitions: **Modify or fix jobs with incorrect or outdated configurations using DBMS_SCHEDULER.SET_ATTRIBUTE.**
- Create new jobs: **Set up jobs to automate tasks like backups, data imports, or ETL processes.**
- Review job timings: **Ensure jobs are not overlapping unnecessarily and causing resource contention.**
- Adjust schedules: **Update job frequency using the DBMS_SCHEDULER.SET_ATTRIBUTE to prevent system overload during peak hours.**
- The File API allows web developers to work with files selected from the user's system via file input or drag-and-drop.
- APIs provided by cloud services for managing files, e.g., AWS S3, Google Drive API.

Professional Qualification:

- **MBA completed in JNTU University**

Technical Skills :

Programming Languages	Oracle SQL, PLSQL ,PostgreSQL,DBA , Data analyst,MySQL,MS SQL, Azure Data factory,T-SQL,UNIX,SSIS,SSRS, shell scripting,ETL Developer ,JSON,FILE.API,ORACLE SCHEDULER,
RDBMS	ORACLE 10g, 11g, 12c.
IDE	SQL Developer, Toad, PL/SQL Developer , SQL Reporting Service, Troubleshooting ,PostgreSQL ,sql server developer

Project Experience:

PROJECT : 1

Project Name : CFAO (Carpenter Funds Administrative Office)
Organization : Vitech Systems Asia, Hyderabad
Role : Developer
Duration : May 2020 to 2022 Nov

Description:

CFAO is fund office which administer the funds contributed by employers and their employees. Fund office maintains work history and contribution history of each employee and disburses the fund in the form of pension or health claims.

V3 benefits is a retirement and health administration software(product) designed to manage multi/single employer funds. The application provides multiple views based on user type it displays different screens like Line of Business, Employer Self Service, Member Self Service, and Admin Self Service. To allow efficient administration, V3 followed modular design approach. This software consists of different modules like World, Contributions, Pension, Eligibility and Self pay.

PROJECT : 2

Project Name : Bank Management system

Tools & Technologies : MySQL/PostgreSQL/SQL Server, ERD Design Tools (e.g., Lucidchart/DB Designer), and SQL Workbench

Duration : 2022 Dec Till Date

Discription :

Developed a robust database system for a fictional bank to manage customer accounts, transactions, loans, and employee data efficiently.

Designed and implemented normalized database schema using SQL (ERD with tables like Customers, Accounts, Transactions, Loans, and Employees).

Created triggers to ensure data integrity (e.g., balance updates after transactions).

Wrote complex queries for generating financial reports and tracking customer account details.

Implemented stored procedures for automating tasks like interest calculation on savings accounts and loan repayment schedules. Ensured

database security by granting role-based access and maintaining audit logs.
Optimized queries for performance using indexes and query analysis tools.
Stores details such as name, address, contact information, and unique customer IDs.
Supports different types of accounts: savings, current, and fixed deposits.
Tracks account creation, closure, and updates.
Maintains balance and account activity logs.
Generates transaction history for a specific account or time period.

Responsibilities:

- Understanding the requirements of the system. Used SQL Developer Tool for faster Application design and Developments.
- Written Packages, Stored Procedures and Functions as per requirement.
- Used Bulk collect while fetching and processing the data to improve the performance.
- Implemented business logic by creating & coding of the SQL
- Involved in preparing the Data Structure Impacts where in the database table structures, their primary-foreign key relations, constraints were defined.
- Involved in creation of table indexes, views, Sequences and constraints.
- Involved in preparing technical documents and wrote complex SQL joins and SQL queries , Indexes, Sequences.
- In-depth knowledge in writing medium and complex queries using joins, subqueries and grouping.
- Aware of PL/SQL concepts like cursor, exception handling.
- Experience on creating Triggers and Pragma Autonomous Transactions.
- Good knowledge in PL/SQL objects with constructors and also nested tables.
- Good work experience with regular expressions.

- **Ability to write complex SQL Queries and code reviewing.**
- **Knowledge on performance tuning of the queries and PL/SQL Sub programs.**
- **Appetite to learn new technologies and can work under pressure environment.**
- **Excellent communication, interpersonal, research/analysis and organizational skills.**
- **Collecting data from various sources, including databases, APIs, surveys, and external datasets.**
- **Ensuring the data gathered is accurate, relevant, and complete.**
- **Identifying and correcting data inconsistencies or errors.**
- **Transforming raw data into a usable format (e.g., normalization, aggregation).**
- **Conducting exploratory data analysis (EDA) to identify trends, patterns, and anomalies.**
- **Performing statistical analyses and hypothesis testing.**
- **Design and build AI/ML models to recommend optimal realtime prices for specific products**
- **Develop algorithms to dynamically adjust prices based on different conditions.**
- **Design, build and optimize data models as part of data warehouse development,Design and create ETL pipelines.**
- **Exploit elasticity and agility of Synapse to build a robust ETL solution.**
