SUMMARY

Results-oriented software engineer with C/C++ expertise and proven success at Dell Technologies. Adept at optimizing efficiency and driving AI/ML innovation. Excellent problem-solving skills and strong ability to work in team environments. Always eager to learn and embrace new challenges

EDUCATION

Vellore Institute of Technology | Vellore, Tamil Nadu
Computer Science and Programming | 08/2024

- CGPA: 8.13

- Served as Coordinator for Riviera'23

Narayana Junior College | Tirupati, Andhra Pradesh
Mathematics, Physics and Chemistry | 06/2019

- CGPA: 9.79

SKILLS SUMMARY

Languages: C, C++, Python, Perl, HTML, CSS, JavaScript, SQL

Expertise: Data Structures and Algorithms, Object-Oriented Programming (OOP), Operating System, Machine Learning, Computer Network Protocols, Product Security, Documentation Practices, Testing Techniques, Multithreading, Automation, Debugging.

Frameworks: Design Patterns, SDLC, Agile

Tools: Git, Jira, Confluence, MS Word, Excel, PowerPoint

Platforms: Unix/Linux (Operating System), Azure, MySQL

Soft Skills: Collaboration, Communication, Problem-Solving, Attention to Detail, Teamwork, Adaptability

WORK EXPERIENCE

Reliability and Production Engineer – Morgan Stanley (BCT Consulting)

Bangalore, Karnataka | 08/2024 – Present

- Managed and maintained multiple databases, ensuring smooth execution of processes and job runs.
- Proactively addressed job failures and resolved various database issues to ensure uninterrupted operations.
- Supported the implementation of a Python script that consolidates ServiceNow data and presents it on a dynamic dashboard, enhancing organizational visibility and decision-making.

Graduate Intern - Dell Technologies

Bangalore, Karnataka | 07/2023 - 05/2024

- Enhanced features within Data Domain storage appliances using C/C++ in a Linux environment.
- Spearheaded the integration of two new options into a tool, increasing productivity and cutting runtime by 30% and 80% for two different processes.
- Authored 4 - unit tests for these options using Perl.
- Implemented optimization strategies, resulting in a 50% increase in storage efficiency, expediting service delivery times, conserving space, and ensuring client satisfaction.
- Executed bug fixes within Perl-based testing automation scripts, ensuring flawless execution and precision in test outcomes.
- Participated in code reviews and maintained standard coding practices.
- Contributed to the analysis and resolution of customer-found defects (CFD 's) to identify root causes and implement solutions, enhancing my proficiency in file systems.

PROJECTS PORTFOLIO

- **University Management System:** Constructed a comprehensive university management system using Java Swing, Applets and SQL, hosted on Amazon Web Services for streamlined cloud-based implementation, accessible to faculty and students.
- **Phishing Website Detection:** Utilized binary classification techniques to develop a system for detecting phishing websites, enhancing user security through predictive machine learning algorithms.
