Summary — Passionate and motivated DevOps Engineer with hands-on experience Of one year in implementing and managing CI/CD pipelines, containerization, and cloud solutions. Adept at utilizing tools such as Jenkins, Docker, and Kubernetes to streamline development and deployment processes. Proficient in AWS services including EC2, S3, and RDS, with a strong foundation in automation and infrastructure as code using Terraform and Ansible. Eager to leverage skills and continue learning to contribute to innovative projects and drive operational excellence.

Technical SKILLS

- | | | | |
|-------------------|-------------------|-------------------|--------------|
| – Devops | – Git/Github | – Nexus Artifacts | – Docker |
| – AWS | – Jenkins (CI/CD) | – Ansible | – Kubernetes |
| – Shell Scripting | – SonarQube | – Terraform | |

Experience

EPAY INDIA PVT LTD

NOV 2023– OCT2024

Junior System Administrator

- Managed Aws resources
- Assist in setting up and maintaining CI/CD pipelines using tools like Jenkins,
- Use Infrastructure as Code (IaC) tools like Terraform or CloudFormation to provision and manage cloud resources.
- Assist in creating and managing environments in AWS, Azure.
- Monitor application and infrastructure health using tools like AWS CloudWatch, Grafana, or Prometheus
- Work with containerization platforms like Docker to build, manage, and deploy containers resolution times.
- Monitor and troubleshoot CI/CD pipelines for build or deployment failures
- Terminating/Stopping/Creating EC2 instances using AWS Console.
- Creating CI/CD Pipelines by integrating GIT, Maven, Jenkins, Ansible, Nexus, SonarQube and Tomcat.
- Set up and managed VPCs with subnets, NAT gateways, and security groups to ensure secure and efficient network architecture.
- Automated the provisioning of AWS infrastructure using Terraform
- Developed Docker files to containerize applications, ensuring consistency across development, testing, and production environments.
- Implimented k8s cluster and wrote yaml file for the deployment
- Collaborate with developers, QA, and operations teams to troubleshoot and resolve issues
- Assist in managing Kubernetes clusters or other orchestration platforms to deploy and scale applications.
- Perform regular vulnerability scans using tools like SonarQube, Dependency Check, or Trivy.
- Attend daily standups or team meetings to discuss progress and blockers.

Education

OSMANIA UNIVERSITY

Specialization in Computer Appllication
CGPA - 8.25

2020 – 2023
Hyderabad, INDI

Projects

AWS AND DEVOPS ROLES AND RESPONSIBILITIES

- Integrated SonarQube into the Jenkins pipeline to perform code quality scans, ensuring adherence to coding standards and practices.
- Utilized Maven for building Java projects, managing dependencies, and ensuring consistent builds across different environments
- Developed Docker files to containerize applications, ensuring consistency across development, testing, and production environments.
- Implemented Trivy for scanning Docker images to identify .
- Implemented AWS CloudFormation templates to provision and manage AWS resources (IAAS) such as EC2, VPC, SUBNETS, IGW, NAT,Security Groups, NACLs ELB, RDS, EBS, S3. minimal manual intervention.
- effectively.
- Used Amazon CloudWatch for monitoring and alerting on AWS resources, ensuring high availability and performance.
- security best practices using AWS IAM to manage user roles and permissions, ensuring secure access to AWS resources. .

Debian Linux

- Maintained packages in Debian repositories
- Reviewed and sponsored packages on behalf of prospective Developers
- Resolved bugs reported in bug tracking system EX : GIT GITHUB
