

Sunakshi Nirwan

Jaipur, India — +91-9079769584 — sunakshi660@gmail.com

Professional Summary

Results-driven Software Developer with 2+ years of experience in Java back-end development and IoT integration. Expert in building scalable systems using Spring Boot, optimizing APIs, and automating processes to enhance performance. Proven ability to deliver secure, efficient solutions while collaborating in fast-paced environments to meet complex business objectives.

Core Skills

Java, Spring Boot, Spring MVC, RESTful APIs, MQTT, Kafka, RabbitMQ, MySQL, MongoDB, JavaScript, HTML, CSS, JSON, Redis, IoT Device Integration, Payload Parsing, Schedulers.

Professional Experience

Java Developer

CITILIGHT, Gurugram

October 2023 – Present

- Currently working on an IoT-based **Smart Street Lightning System (SSLS)**, integrating IoT devices using the **MQTT protocol** to enable seamless data exchange between the server and devices.
- Developed the LMS with **Java socket programming**, managing **10,000+ devices** through **TCP/IP communication**, ensuring scalability and system reliability.
- Implemented efficient parsing of payload uplinks from IoT devices, storing the data in a database for reliable and accessible information.
- Designed and implemented efficient parsing of payload uplinks from IoT devices, storing parsed data in **MySQL** and **MongoDB** for accurate and accessible information.
- Streamlined device management by integrating Remote Terminal Unit (RTU) operations into LMS, enabling features like ON/OFF control, RTU configuration, and firmware updates, reducing manual intervention by 40%.
- Utilized **Postman** for efficient API testing, validating endpoints for optimal performance and security.
- Generated and validated **JSON data** to meet project specifications, ensuring compatibility and smooth data exchange across systems.
- Optimized system performance with **RabbitMQ**, **Kafka**, and **Redis**, enabling low-latency data communication and retrieval.

Associate Software Engineer

Fulcrum Digital, Pune

October 2021 – October 2022

- Designed and deployed **secure APIs** for financial data handling, adhering to **PCI-DSS compliance standards**, safeguarding sensitive information.
- Contributed to the **Mastercard (Sapient)** project as a **Java Back-End Developer**, building scalable and high-performance financial processing systems, implementing caching mechanisms and query optimizations and enhancing user experience.
- Collaborated with cross-functional teams to integrate MongoDB and MySQL databases into existing systems, enabling seamless data management and retrieval.

Education

Bachelor of Technology – Computer Science

Arya Institute of Engineering and Technology,

Jaipur

August 2017 - 2021
