SKILLS

programming languages: java ,Python

Analytical Skill : Mysql,Numpy,sckit-learn

Special skills : Machine learning

problem solving and Critical thinking:
Oops,DSA

EDUCATION

Bachelors Degree

SRM institute of science and technology

2020-2024

CSE with specialization in Artificial Intelligence and Machine Learning
CGPA:9.30

Higher Secondary Education

Tirumala Junior Kalasala

2018-2020

Science Stream(MPC) CGPA:9.79

LANGUAGES

English

Telugu

Hindi

ACHIVEMENTS

CONVENOR-DIRECTORATE OF STUDENT AFFAIRS
Aug'23-May'24

PROFESSIONAL SUMMARY

Innovative and results-driven software engineer with expertise in Python, java and MySQL. Proficient in database management systems (DBMS) and object-oriented programming (OOP) principles. Experienced in developing and deploying machine learning models to solve complex problems. Adept at combining technical proficiency with exceptional soft skills, problem-solving abilities, and adaptability to thrive in dynamic and fast-paced environments. Excellent communication skills with a proven ability to deliver effective presentations. A collaborative team player committed to achieving collective goals and continuous improvement.

CERTIFICATION

Python

YBI

Sep'21-Nov'21

- Provides comprehensive training in using Python for data analytics
- Covers fundamental and advanced topics including data collection and cleaning, exploratory data analysis (EDA), and data visualization techniques
- Involves hands-on experience with key Python libraries such as Pandas, NumPy, Matplotlib, and Seaborn

Machine Learning

AWS Academy

Sep'22-Dec'22

- Provides comprehensive training in machine learning principles and applications
- Covers key topics including supervised and unsupervised learning, model evaluation, and feature engineering
- Focuses on real-world applications and case studies
- Develops proficiency in handling large datasets, implementing algorithms, and fine-tuning models

PROJECTS

DIABETES PREDICTION

Aug'23-Dec'23

- Develop a tool to assist healthcare professionals in identifying individuals at risk of developing diabetes early, enabling preventive measures and timely treatment.
- Utilize machine learning algorithms to analyze patient data, predict diabetes risk, and provide actionable insights.
- Facilitate early identification of at-risk individuals, improve patient outcomes through preventive care, and enhance management of diabetes.

VOICE BASED VIRTUAL ASSISTANT FOR WINDOWS

Jan'23-Apr'23

- Designed and implemented a Windows-based voice-activated virtual assistant using Python and speech recognition.
- Leveraged natural language processing (NLP) to create a user-centered solution, enhancing interaction and functionality.
- Demonstrated expertise in Python programming and AI-driven applications while refining skills in developing intuitive and efficient solutions.
